## EJX130A

Differential Pressure Transmitter

## GS 01C25B04-01EN

The high performance differential pressure transmitter EJX130A features single crystal silicon resonant sensor and is suitable to measure liquid, gas, or steam flow as well as liquid level, density and pressure. EJX130A outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure. Its highly accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via BRAIN or HART communications. Other key features include quick response, remote set-up using communications, diagnostics and optional status output for pressure high/low alarm. The multi-sensing technology provides the advanced diagnostic function to detect such abnormalities as an impulse line blockage or heat trace breakage. Foundation Fieldbus and PROFIBUS PA protocol types are also available. All EJX series models in their standard configuration, with the exception of the Fieldbus and PROFIBUS types, are certified by TÜV as complying with SIL 2 for safety requirement.

## STANDARD SPECIFICATIONS

5 -digit numerical display, 6-digit unit display and bar graph.
The indicator is configurable to display one or up to four of the following variables periodically.;
Measured differential pressure, differential pressure in \%, scaled differential pressure, measured static pressure. See also "Factory Setting."

Local Parameter Setting (Output signal code D, E, and J)
Parameter configuration by the external zero adjustment screw and push button (Integral indicator code E) offers easy and quick setup for parameters of Tag number, Unit, LRV, URV, Damping, Output mode (linear/square root), Display out 1, and Re-range by applying actual pressure (LRV/URV).

- Impulse line blockage detection

The impulse line condition can be calculated and detected by extracting the fluctuation component from the differential pressure and static pressure signals. The EJX130A detects the impulse line abnormality particularly which side of impulse line is plugged.

- Heat trace monitoring The change of the flange temperature calculated by using the two temperature sensors built in the EJX enables to detect the heat trace breakage or the abnormal temperature due to the failure.

## < Ordering Information>" " "

Specify the following when ordering
For output signal code -J, refer to GS 01C25T0101EN.

1. Model, suffix codes, and option codes
2. Calibration range and units
1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000 . When reverse range is designated, specify Lower Range Value(LRV) as greater than Upper Range Value(URV). When square root output mode is specified, LRV must be "0 (zero)".
2) Specify only one unit from the table, 'Factory setting.'
3. Select linear or square root for output mode and display mode.
Note: If not specified, the instrument is shipped set for linear mode.
4. Display scale and units (for transmitters equipped with the integral indicator only)
Specify either 0 to $100 \%$ or 'Range and Unit' for engineering units scale:
Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000 . Unit display consists of 6 -digit, therefore, if the specified scaling unit excluding '" 's longer than 6 -characters , the first 6 characters will be displayed on the unit display.
5. Tag Number (if required)

Specified characters (up to 16 characters for BRAIN, 22 characters for HART, or 16 characters for /N4 tag) are engraved on the stainless steel tag plate fixed on the housing.
6. SOFTWARE TAG (for HART only. If required) Specified characters (up to 32 characters) are set as "Tag" (the first 8 characters) and "Long tag"*1 ( 32 characters) in the amplifier memory. Use alphanumeric capital letters.
When the "SOFTWARE TAG" is not specified, specified "TAG NO" is set as "Tag" (the first 8 characters) and "Long tag"*1 ( 22 characters) in the amplifier memory.
*1: applicable only when HART 7 is selected.
7. Other factory configurations (if required)

Specifying option code CA or CB will allow further configuration at factory. Following are configurable items and setting range.
