The high performance flange mounted differential pressure transmitter EJA210E can be used to measure levels of densities of solidifying or precipitating liquids. EJA210E outputs a 4 to 20 mA DC signal corresponding to the measured differential pressure. Its accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via BRAIN or HART communications. Other key features include quick response, remote set-up using communications and self-diagnostics. FOUNDATION Fieldbus, PROFIBUS PA and 1 to 5 V DC with HART (Low Power) protocol types are also available. All EJA-E series models in their standard configuration, with the exception of the Fieldbus, PROFIBUS and Low Power types, are certified as complying with SIL 2 for safety requirement.

- **STANDARD SPECIFICATIONS**

Refer to GS 01C31T02-01EN for Fieldbus communication type and GS 01C31T04-01EN for PROFIBUS PA communication type for the items marked with “◊.”

### SPAN AND RANGE LIMITS

### PERFORMANCE SPECIFICATIONS

Zero-based calibrated span, linear output, wetted parts material code SW for 3-inch flange flush type, and fill fluid code B.

For Fieldbus and PROFIBUS PA communication types, use calibrated range instead of span in the following specifications.

**Specification Conformance**

EJA-E series ensures specification conformance to at least ±3σ.

**Reference Accuracy of Calibrated Span**

(includes terminal-based linearity, hysteresis, and repeatability)

<table>
<thead>
<tr>

**Effect on Zero**

M and H capsules

±0.007% of URL

**Stability**

±0.1% of URL per 12 months

**Power Supply Effects(Output signal code D and J)**

±0.005% per Volt (from 21.6 to 32 V DC, 350Ω)

**Response Time (Differential pressure)**

M and H capsule: 120 ms (approximate value at normal temperature)

When software damping is set to zero and including dead time of 45 ms (nominal)
Static Pressure Signal Range and Accuracy
(For monitoring via communication or on
indicator for BRAIN and HART communication
type. Includes terminal-based linearity,
hysteresis, and repeatability)

Range
Upper Range Value and Lower Range Value of the
static pressure can be set in the range between 0
and Maximum Working Pressure (MWP*). The upper
range value must be greater than the lower range
value. Minimum setting span is 0.5 MPa (73 psi).
* : Maximum Working Pressure (MWP) is within
flange rating pressure.

Accuracy

Absolute Pressure
1 MPa or higher: ±0.5% of span
Less than 1 MPa: ±0.5%×(1 MPa/span) of span

Gauge Pressure Reference
Gauge pressure reference is 1013 hPa (1 atm)

Note: Gauge pressure variable is based on the above
fixed reference and thus subject to be affected by
the change of atmospheric pressure.

□ FUNCTIONAL SPECIFICATIONS

Output “◊”

For 4 to 20 mA HART / BRAIN
(Output signal code D and J)
Two wire 4 to 20 mA DC output with digital
communications.
BRAIN or HART FSK protocol are superimposed on
the 4 to 20 mA signal.
Output range: 3.6 mA to 21.6 mA
Output limits conform to NAMUR NE43 can be preset
by option code C2 or C3.

For 1 to 5 V HART (Output signal code Q)
Three or four wire low power 1 to 5 V DC output with
HART, linear or square root programmable. HART
protocol are superimposed on the 1 to 5 V DC signal.
Output range: 0.9 V to 5.4 V DC

Failure Alarm

For 4 to 20 mA HART / BRAIN
(Output signal code D and J)
Output status at CPU failure and hardware error;
Up-scale: 110%, 21.6 mA DC or more (standard)
Down-scale: ~5%, 3.2 mA DC or less

For 1 to 5 V HART (Output signal code Q)
Analog output status at CPU failure and hardware
error;
Up-scale: 110%, 5.4 V DC or more (standard)
Down-scale: ~5%, 0.8 V DC or less

Damping Time Constant (1st order)
Amplifier damping time constant is adjustable from
0.00 to 100.00 s by software and added to response
time.
Note: For BRAIN protocol type, when amplifier software
damping is set to less than 0.5 s, communication
may occasionally be unavailable during the
operation, especially while output changes
dynamically. The default setting of damping
ensures stable communication.

Update Period “◊”

Differential pressure: 45 ms
Static pressure: 360 ms

Zero Adjustment Limits
Zero can be fully elevated or suppressed, within the
lower and upper range limits of the capsule.

External Zero Adjustment
External zero is continuously adjustable with
0.01% incremental resolution of span. Re-range
can be done locally using the digital indicator with
rangesetting switch.

Integral Indicator (LCD display, optional) “◊”
5-digit numerical display, 6-digit unit display and bar
graph.
The indicator is configurable to display one or up to
four of the following variables periodically;
Measured differential pressure, differential pressure
in %, scaled differential pressure, measured static
pressure. See also “Factory Setting.”

Local Parameter Setting
(Output signal code D, J and Q)
Parameter configuration by the external zero
adjustment screw and push button (Integral indicator
code E) offers easy and quick setup for parameters of
Tag number, Unit, LRV, URV, Damping, Output mode
(linear/square root), Display out 1, and Re-range by
applying actual pressure (LRV/URV).

Self Diagnostics
CPU failure, hardware failure, configuration error,
process alarm for differential pressure, static
pressure or capsule temperature.
User-configurable process high/low alarm for
differential pressure and static pressure is also
available.

Signal Characterizer
(Output signal code D, J and Q)
User-configurable 10-segment signal characterizer
for 4 to 20 mA output.

SIL Certification
EJA-E series transmitters except Fieldbus,
PROFIBUS PA and 1-5V DC with HART (Low Power)
communication types are certified in compliance with
the following standards;
IEC 61508: 2010; Part1 to Part 7
Functional Safety of Electrical/electronic/
programmable electronic related systems; SIL 2
capability for single transmitter use, SIL 3 capability
for dual transmitter use.

□ NORMAL OPERATING CONDITION
(Optional features or approval codes may
affect limits.)

Ambient Temperature Limits
~40 to 85°C (~40 to 185°F)
~30 to 80°C (~22 to 176°F) with LCD display
(Note: The ambient temperature limits must be within the
fill fluid operating temperature range, see table 1.)

Process Temperature Limits
High pressure side: See table 1.
Low pressure side: ~40 to 120°C (~40 to 248°F)

Ambient Humidity Limits
0 to 100% RH

Working Pressure Limits
See table 1.
For atmospheric pressure or below, see figure 1.
Supply & Load Requirements
(Output signal code D and J. Optional features or approval codes may affect electrical requirements.)
With 24 V DC supply, up to a 550Ω load can be used. See figure 2.

Supply Voltage “◊”
For 4 to 20 mA HART / BRAIN
(Output signal code D and J)
10.5 to 42 V DC for general use and flameproof type.
10.5 to 32 V DC for lightning protector (option code /A.)
10.5 to 30 V DC for intrinsically safe, type n, or non-incendive.
Minimum voltage limited at 16.6 V DC for digital communications, BRAIN and HART

For 1 to 5 V HART (Output signal code Q)
Power supply:
9 to 28 V DC for general use and flame proof type.
Power Consumption:
0.96 mA to 3 mA, 27 mW

Load for 4 to 20 mA HART / BRAIN
(Output signal code D and J)
0 to 1290Ω for operation
250 to 600Ω for digital communication

Output Load for 1 to 5 V HART
(Output signal code Q)
1 MΩ or greater (meter input impedance)
Note that with three-wire connection, the cable length may affect the measurement accuracy of the output signal.

Communication Requirements “◊”
(Approval codes may affect electrical requirements.)
BRAIN
Communication distance
Up to 2 km (1.25 miles) when using CEV polyethylene-insulated PVC-sheathed cables.
Communication distance varies depending on type of cable used.
Load capacitance
0.22 µF or less
Load inductance
3.3 mH or less
Input impedance of communicating device
10 kΩ or more at 2.4 kHz.

EMC Conformity Standards
EN 61326-1 Class A, Table2
EN 61326-2-3
EN 61326-2-5 (for fieldbus)

European Pressure Equipment Directive
2014/68/EU
Sound Engineering Practice

EU RoHS Directive
EN 50581

Safety Requirement Standards
EN 61010-1, C22.2 No.61010-1
• Installation category: I
  (Anticipated transient overvoltage 330 V)
• Pollution degree: 2
• Indoor/Outdoor use
Table 1. Process temperature, Ambient temperature, and Working pressure

MODEL AND SUFFIX CODES

Instruction
The model and suffix codes for EJA210E consist of two parts: a transmitter body section (I) and a flange mounting section (II). This specification sheet introduces these two parts separately. The transmitter body section is shown in one table, and the flange mounting section specifications are listed according to the flange size and the process connection style. First select the model and suffix codes of transmitter body section and then continue on one of the flange mounting section.

Output signal
- **D** - 4 to 20 mA DC with digital communication (BRAIN protocol)
- **J** - 4 to 20 mA DC with digital communication (HART 5/HART 7 protocol)*1
- **F** - Digital communication (FOUNDATION Fieldbus protocol, refer to GS 01C31T02-01EN)
- **G** - Digital communication (PROFIBUS PA protocol, refer to GS 01C31T04-01EN)
- **Q** - Low Power, 1 to 5 V DC with digital communication (HART 7 protocol)*7

Measurement span (capsule)
- **M** - 1 to 100kPa (4 to 400 inH2O)
- **H** - 5 to 500kPa (20 to 2000 inH2O)

Low pressure side wetted parts material
- **S** - Refer to “Low Pressure Side Wetted Parts Materials” Table below.

Low pressure side process connections
- **0** - without process connector (Rc 1/4 female on the cover flange)
- **1** - with Rc 1/4 female process connector
- **2** - with 1/4 NPT female process connector
- **3** - with 1/2 NPT female process connector
- **4** - with process connector (1/4 NPT female on the cover flange)

Coverflange bolts and nuts material
- **J** - B7 carbon steel
- **G** - 316L SST
- **C** - 660 SST

Installation
- **-9** - Horizontal piping type and left side high pressure

Amplifier housing
- **1** - Cast aluminum alloy
- **3** - Cast aluminum alloy with corrosion resistance properties*2
- **2** - ASTM CF-8M stainless steel*3

Electrical connection
- **0** - G 1/2 female, one electrical connection without blind plugs
- **2** - 1/2 NPT female, two electrical connections without blind plugs
- **4** - M20 female, two electrical connections without blind plugs
- **5** - G 1/2 female, two electrical connections with a blind plug*4
- **7** - 1/2 NPT female, two electrical connections with a blind plug*4
- **9** - M20 female, two electrical connections with a blind plug*4
- **A** - G1/2 female, two electrical connections and a 316 SST blind plug
- **C** - 1/2 NPT female, two electrical connections and a 316 SST blind plug
- **D** - M20 female, two electrical connections and a 316 SST blind plug

Integral indicator
- **D** - Digital indicator*5
- **E** - Digital indicator with the range setting switch (push button)*6
- **N** - None

Flange mounting section
- **-** - Always N

*1: HART 5 or HART 7 is selectable. Specify upon ordering.
*2: Not applicable for electrical connection code 0, 5, 7, and 9.
*3: Not applicable for electrical connections code 0, 5, 7 and 9.
*4: Material of a blind plug; aluminum alloy for code 5 and 9, and SUS304 for code 7.
*5: Not applicable for output signal code G.
*6: Not applicable for output signal code F.
*7: As CE marking is still pending, not applicable for those countries which require CE marking.

The “►” marks indicate the most typical selection for each specification.

---

The "►" marks indicate the most typical selection for each specification.

Example: EJA210E-DSM5G-912NN-VA13B1SW00-B/

*1: See Table 3 'Gasket contact surface' on Page 5.

*2: When specified flushing connection ring code A or B, exclusive gasket is provided for transmitter side.

*3: Indicates the process temperature limit of high pressure side. The process temperature limit for low pressure side is –40 to 120°C except fill fluid code -D.

*4: The distance 'S' is extended in 30mm.

*5: In case of wetted parts material code TW (Tantalum), the process temperature limit is –10 to 200°C.

*6: Not applicable for flashing connection ring code A and B.

*7: Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user’s process fluids. Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

*8: For sanitary use (Propylene glycol) –10 to 120°C

*9: Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user’s process fluids. Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

*10: Forged version of the material may be used.

*11: Specify always with option code /K2 or /K6.

Please refer to latest standards for details.
II. Flange mounting section (Flush type)

The “►” marks indicate the most typical selection for each specification.

Example: EJA210E-DM5SG-912NN-WA18B1WWC0-B/

*1: See Table 3 ‘Gasket contact surface’ on Page 5.

*2: When specified flushing connection ring code C or D, exclusive gasket is provided for transmitter side.

*3: Indicates the process temperature limit of high pressure side.

*4: The distance ‘S’ is extended in 30mm.

*5: Not applicable for gasket contact surface code 1.

*6: Hastelloy C-276 or ASTM N10276

*7: Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user’s process fluids.

*8: Forged version of the material may be used.

*9: Specify always with option code /K2 or /K6.

The '#' marks indicate the construction materials conform to NACE material recommendations per MR0175 (2003).

Please refer to latest standards for details.
## II. Flange mounting section (Extended type)

- **Process flange size**: 4-inch (100mm)

#### Flange rating
- J1: JIS 10K
- J2: JIS 20K
- A1: ANSI class 150
- A2: ANSI class 300
- P1: JPI class 150
- P2: JPI class 300
- D1: DIN PN10/16
- D2: DIN PN25/40

#### Flange size
- 4: 4-inch (100mm)

#### Flange material
- A: JIS S25C
- B: 304 SST
- C: 316 SST

#### Gasket contact surface
- 1: Serration (for ANSI flange only)
- 2: Flat (no serration)

#### Wetted parts material (high pressure side)
- SE: 316L SST

#### Flushing connection ring
- 0: None

#### Extension
- 1: Length (X1) = 50mm
- 3: Length (X2) = 100mm
- 5: Length (X3) = 150mm

#### Fill fluid
- -A: For high temperature use (Silicone oil)
- -B: For general use (Silicone oil)
- -D: For oil prohibited use (Fluorinated oil)
- -P: For sanitary use (Propylene glycol)

#### Option codes
- /O: Optional specification

---

The "►" marks indicate the most typical selection for each specification.

**Example**: EJA210E-DMSSG-912NN-EA1B1SE01-B/

*1: See Table 3 'Gasket contact surface' on Page 5.

*2: Indicates the process temperature limit of high pressure side.

*3: The distance 'S' is extended in 30mm.

*4: Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user's process fluids. Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150°C [302°F] or above). Contact Yokogawa for detailed information of the wetted parts material.

*5: Forged version of the material may be used.

*6: Specify always with option code /K2 or /K6.

The '#' marks indicate the construction materials conform to NACE material recommendations per MR0175 (2003). Please refer to latest standards for details.

</table>

*1: Amplifier cover only
*2: Anti-corrosion coating
*3: 316 SST zero-adjustment screw and setscrews
*4: Degrease cleansing with fluorinated oil filled capsule
*5: Calibration units
*6: Teflon film
*7: Diaphragm protection from sticky process fluid by FEP Teflon film attached with fluorinated oil
*8: Output limits and failure operation
*9: Gold-plated diaphragm
*10: Data configuration at factory
*11: Material certificate
*12: Pressure test/Leak test certificate
*13: Nitrogen (N2) Gas Retention time: one minute
*1: Not applicable for amplifier housing code 2 and 3.
*2: Not applicable with color change option. Not applicable for amplifier housing code 2.
*3: 316 or 316L SST. The specification is included in amplifier code 2.
*4: Applicable only when fill fluid code -D is specified.
*5: The unit of MWP (Max. working pressure) on the name plate of a housing is the same unit as specified by option code D1, D3, and D4.
*6: Applicable for flush type (process connection style code W.)
*7: Applicable for flushing connection ring code 0.
*8: Applicable for output signal code D and J. The hardware error indicates faulty amplifier or capsule.
*9: Applicable for wetted parts material code SW, SE, WW, WE, and HW. Consult Yokogawa in case gold-plated diaphragm is required for low pressure side.
*10: Also see ‘Ordering Information.’
*11: Applicable for Low Pressure Side Process connection code 0 and 5.
*12: Applicable for Low Pressure Side Process connection code 1, 2, 3, and 4.
*13: Applicable for flushing connection ring code A, B, C, and D.
*14: The unit on the certificate is always MPa regardless of selection of option code D1, D3, or D4.
*15: A flushing connection ring will not be applied when conducting the pressure test or leak test.
*16: Applicable for extended type (process connection style code E.)
*17: Pure nitrogen gas is used for oil-prohibited use (option code K1, K2, K5, and K6.)
*18: The 1 to 5 V voltage output corresponding to 4 to 20 mA current output is applied to output signal code Q which is non-compliant to NAMUR NE43.
### DIMENSIONS

*1: Indicates inside diameter of gasket contact surface.
*2: When option code K1, K2, K5, or K6 is selected, add 15 mm (0.59 inch) to the value in the flange.
*3: When electrical connection code 7 or C is selected, a blind plug is protruded up to 8 mm from the conduit connection.
### Process flange size: 4 inch (100 mm)

### Terminal Wiring for 1 to 5 V output

- **Power supply terminals**: SUPPLY + ①
- **External indicator (ammeter) terminals**: CHECK + ②
- **Ground terminal**: Ground terminal

*1: When using an external indicator or check meter, the internal resistance must be 10 Ω or less.
*2: Not available for FOUNDATION Fieldbus and PROFIBUS PA communication types.

### Terminal Wiring for 4 to 20 mA output, FOUNDATION Fieldbus and PROFIBUS PA communication types

- **Power supply and output terminals**: SUPPLY + ①
- **External indicator (ammeter) terminals**: CHECK + ②
- **Ground terminal**: Ground terminal

*1: When using an external indicator or check meter, the internal resistance must be 10 Ω or less.
*2: Not available for FOUNDATION Fieldbus and PROFIBUS PA communication types.

### Terminal Wiring for 1 to 5 V output

- **Power supply terminals**: SUPPLY + ①
- **1 to 5 V DC with HART communication terminals**: VOUT + ②
- **Ground terminal**: Ground terminal

Three or four wire connection. For four wire connection, both supply and signal lines use SUPPLY - terminal.
< Ordering Information > "◊"
Specify the following when ordering

1. Model, suffix codes, and option codes
2. Calibration range and units:
   1) Calibration range can be specified with range value specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. When reverse range is designated, specify LRV as greater than URV. When square root output mode is specified, LRV must be "0(zero)".
   2) Specify only one unit from the table, ‘Factory setting.’
3. Display scale and units (for transmitters equipped with the integral indicator only)
   Specify either 0 to 100 % or ‘Range and Unit’ for engineering units scale;
   Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding '/' is longer than 6-characters, the first 6 characters will be displayed on the unit display.
4. HART PROTOCOL
   When output signal code is "J", specify the HART protocol revision “5” or “7”.
5. TAG NO (if required)
   Specified characters (up to 16 characters for BRAIN, 22 characters for HART, or 16 characters for /N4 tag) are engraved on the stainless steel tag plate fixed on the housing.
6. SOFTWARE TAG (for HART only, if required)
   Specified characters (up to 32 characters) are set as “Tag” (the first 8 characters) and “Long tag”\(^{*1}\) (32 characters) in the amplifier memory. Use alphanumeric capital letters.
   When the "SOFTWARE TAG" is not specified, specified “TAG NO” is set as “Tag” (the first 8 characters) and “Long tag”\(^{*1}\) (22 characters) in the amplifier memory.
   *1: applicable only when HART 7 is selected.
7. Other factory configurations (if required)
   Specifying option code CA or CB will allow further configuration at factory. Following are configurable items and setting range.
   [CA : For HART communication type]
   1) Descriptor (up to 16 characters)
   2) Message (up to 30 characters)
   3) Software damping (0.00 to 100.00 s)
   [CB : For BRAIN communication type]
   1) Software damping (0.00 to 100.00 s)

< Factory Setting >
