DPharp EJA-E Series can perform remote setting and monitoring of measuring ranges, damping time constant, etc. through a HART protocol revision5(HART 5) and revision7(HART 7) compliant configuration tool.

**FEATURES**

- **Remote Ranging and Monitoring Functions**
  Ranges can be remotely set and monitored through HART communication.

- **On-line Communication**
  Output signal and communication signal do not interfere making on-line communication possible.

- **Enhanced Burst Mode and Event Notification (HART 7)**
  Advanced burst mode includes the variety of transmission setting by specifying burst variables, update period, and message trigger mode, and event notification function gives you alert signal based on the status change in preset values and self-diagnosis.

- **Long Tag Supporting Up to 32 Characters (HART 7)**
  Long tag secures a better asset management with abundant digits in its software.

- **Self-Diagnostic**
  Pressure input outside of range limit, excessive ambient temperature, incorrect span setting etc. can be diagnosed through HART communication.

- **HART protocol revision selectable**
  (Output signal code -J)
  Selectable from HART 5 and HART 7.

**STANDARD SPECIFICATIONS**

For items other than those described below, refer to each General Specification sheet.

**HART Protocol Revision**

- **Output signal code -J**
  HART protocol revision can be selected from 5 or 7 when ordering. The protocol revision can be changed by user configuration.

- **Output signal code -Q**
  HART 7

**Write Protection Switch**

Hardware/software write protection switch

**Conditions of Communication Line**

(Output signal code -J)

Supply Voltage:
- General Use & Explosion proof Type
  16.6 to 42 V DC
- Intrinsically safe Type
  Refer to each General Specification sheet.

Load resistance:
See figure 1.

---

**Figure 1. Relationship Between Power Supply Voltage and External Load Resistance**

(Output signal code D and J)
**FUNCTIONAL SPECIFICATIONS**

Functional specifications for remote setting and monitoring

</tr>
</tbody>
</table>

HART protocol revision and communication
Protocol revision supported by HART configuration tool must be the same or higher than that of the EJA-E transmitters.
HART 7 communication is supported by FieldMate R2.02 or later.

<Ordering Information>
Specify the following when ordering.
1. Model, suffix codes, and optional codes
2. Calibration range and units:
   1) Calibration range can be specified with range value specification up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000.
   2) Specify only one unit from the above table, 'Unit of Calibration Range.'
3. Select linear or square root for output mode and display mode.
   Note: If not specified, the instrument is shipped set for linear mode.
4. Display scale and units (for transmitters equipped with the integral indicator only)
   Specify either 0 to 100 % or 'Range and Unit' for engineering units scale:
   Scale range can be specified with range limit specifications up to 5 digits (excluding any decimal point) for low or high range limits within the range of -32000 to 32000. Unit display consists of 6-digit, therefore, if the specified scaling unit excluding '/' is longer than 6-characters, the first 6 characters will be displayed on the unit display.
5. Tag Number (if required)
   Specify tag number (up to 22 letters) to be engraved on the tag plate. The specified letters are written on 'Tag' (the first 8 letters) and 'Long tag'(22 letters)\(^2\) in the amplifier memory.
6. Software tag
   Specify this software tag when tag number which is different from the tag number specified in the "Tag Number" is required. The tag number specified\(^1\) in "SOFTWARE TAG" will be entered on "Tag" (the first 8 letters) and "Long tag" (32 letters)\(^2\) in the amplifier memory.
7. HART protocol revision
   Specify the HART protocol revision "5" or "7".

*1: Up to 32 characters are specified
*2: Applicable only for HART 7
