

General Specifications

YFGW520
Field Wireless Access Point

GS 01W02E02-01EN

■ GENERAL

This General Specification(GS) describes the hardware specifications for Field Wireless Access Point and specifications of attached software. This product is based on the industrial automation wireless communication standard ISA100.11a of the International Society of Automation (ISA). ISA100.11a is approved as an International Standards (IEC 62734) by International Electrotechnical Commission (IEC). This product has backbone router function based on ISA100.11a, and combining this with Field Wireless Management Station (YFGW410) and/or Field Wireless Media Converter (YFGW610) composes the field wireless system. YFGW520 is a successor to YFGW510, enabling robust and longer distance backbone network construction.

For outline of a field wireless system, and details of each product, see related product General Specifications.

■ FEATURES

●High-performance, compact industrial wireless access point

This product is an industrial wireless access point, compact and lightweight and supporting industrial automation wireless communication standard ISA100.11a. Enabling you to build a robust field wireless network, the access point provides reliable communication.

●Duocast (ISA100.11a Standard)

This product supports the "Duocast" function of ISA100.11a standard. Enabling simultaneous communication with two YFGW520s, thereby creating a redundant communication path, increasing the reliability of the field wireless network.

●Robust and plant-wide network

This product supports two types of optical fiber communication option, makes it possible to construct a noise resistant and long distance (max 5 km) backbone network by combining with YFGW610.

*1: In outdoor wiring of Field Wireless Backbone, it is recommended to use optical fiber cables with a nonmetallic tension member, combining with YFGW610.

*2: This is the maximum radio output at N-type connector for antenna connection. Radio output power depends on the region and the antenna type.

*3: 2-pole SC connector cannot be used due to the conduit hole size limitation. SC connector should use Short Boot type.

*4: Core diameter / cladding diameter 50/125 μm core or 62.5 / 125 μm can be used.

*5: ITU-T G.652 compliant products can be used.

*6: The maximum length needs perfect conditions without an obstruction for radio wave transmission, using a standard antenna (2 dBi). The maximum length changes with the environmental conditions and installation situations of a site.

*7: Installation of these multiple product and YFGW410 in one field wireless subnet requires direct connection or the connection via IEEE1588PTP basis products.

*8: TCP based custom protocol used for communication between this product and YFGW410.
