The Pneumatic Flange Mounting Differential Pressure Transmitters measure level or density of practically any liquid in differential spans from 1.25 to 210 kPa at static pressures from full vacuum to flange ratings. The instruments transmit a proportional 20 to 100 kPa signal to remote pneumatic receivers.

**FEATURES**

- Easiest to Install of All Level Transmitters.
- Broad Application Capability.
- Wide Choice of Transmitter Location.
- Time-Proven Differential Pressure Transmitter Design.
- Trouble-Free Construction.
- Easy to Calibrate.
- Wide Range.
- Stable Force Balance System.
- Weatherproof and Dusttight. Bleed air from the mechanism purges the transmitter topworks and, together with the gasketed cover, inhibits entry of vapor and dust.

**Options**

*1: Users must consider the characteristics of selected wetted parts material and the influence of process fluids. The use of inappropriate materials can result in the leakage of corrosive process fluids and cause injury to personnel and/or damage to plant facilities. It is also possible that the diaphragm itself can be damaged and that material from the broken diaphragm and the fill fluid can contaminate the user’s process fluids. Be very careful with highly corrosive process fluids such as hydrochloric acid, sulfuric acid, hydrogen sulfide, sodium hypochlorite, and high-temperature steam (150 °C [302 °F] or above).
Contact Yokogawa for detailed information of the wetted parts material.
