Overview

The Gas Density Meter consists of gas density converter GD402 and gas density detector GD40.

The Model GD402 gas density converter and Model GD40 detector not only provide continuous measurement of gas density, but also several other valuable parameters, including specific gravity and molecular weight. The GD40 detector is designed for intrinsically safe and explosion-proof, explosion protected applications. It is designed to be virtually maintenance free for all accepted applications.

The Model GD402 is a rugged microprocessor-based converter designed in two versions to meet both general area and explosion-proof application requirements. In addition to the display of several key data items, the converter also provides the choice of three different means for calibration: automatic, semi-automatic and one-touch manual operation.

Features

• Proven design
Highly responsive and sensitive measurement of density. Specific gravity, molecular weight and gas concentration can also be displayed using Yokogawa’s gas density analyzing techniques.

• Detector features
1. Resistant to external vibrations.
2. Outstanding stability against sudden changes in gas temperature.
3. The multi-mode self-oscillation circuit minimizes drift caused by the sensor itself or by oil mist, dust, moisture, etc. sticking to the sensor.
4. Easy cleaning and regeneration of sensor.
   Should the sensor be contaminated with dust and/or mist, then it can be easily cleaned and returned to its original condition.
5. Only routine maintenance is required.
   (for example, once per 3 months depending on application.)

• Simple, user-friendly interface
Configuration can be performed locally via the front panel or remotely by using the (optional) “Brain” terminal.

• Low installation cost
Both explosion-proof and general purpose converters are designed for easy mounting on a pipe. Wiring between the detector and converter is based on a two-wire system, keeping installation cost to a minimum.

Only GD402G and GD40G conform to CE marking.

Information of the WEEE Directive
This product is purposely designed to be used in a large scale fixed installations only and, therefore, is out of scope of the WEEE Directive. The WEEE Directive does not apply. The WEEE Directive is only valid in the EU.

CAUTION

This instrument is a Class A product, and it is designed for use in the industrial environment. Please use this instrument in the industrial environment only.
2. GD40G,T,V,R Detector

2.1 Material exposed to gas
SUS316 stainless steel, Acrylonitrile Butadiene Rubber and Fluorine-contained Rubber (o-ring)

2.2 Ambient conditions
Temperature: -10 to 60°C (14 to 140°F)
Humidity: 5 to 95%RH
Installation: Pipe-mounted or on panel
Construction: Intrinsically safe, Explosion-proof

Though the detector construction makes it relatively insensitive to sudden changes in the gas temperature, extra precision can be achieved by keeping ambient temperature conditions as constant as possible. In measurements where optimum precision is required it is therefore not recommended to install the detector in an outdoors environment, especially not if such installation is prone to direct sunlight.

2.3 Finish
Cover: equivalent to Munsell 0.6GY3.1/2.0
Case: equivalent to Munsell 2.5Y8.4/1.2

2.4 Weight
Approx. 7 kg (with Pipe-mounting Bracket)

2.5 Detector unit
When the system is ordered to be used as a hydrogen purity analyzer, an optional pressure analyzer is required for pressure compensation. If /EJAJ1, /EJAF2, /EJAF3 or EJAF4 are ordered, the detector unit and the pressure transmitter and the tubing in between will all be integrated on a single mounting plate. This allows the space where the pressure transmitter is normally mounted to be used effectively for other purposes.
