General Specifications

Model FLXA21
2-Wire Analyzer

GS 12A01A02-01E

General
The model FLXA™ 2-Wire Analyzer, one model of FLEXA™ series, offers single or dual sensor measurement. The modular-designed analyzer offers 4 kinds of measurements – pH/ORP (oxidation-reduction potential), contacting conductivity (SC), inductive conductivity (ISC) or dissolved oxygen (DO) – with the respective sensor module.
For dual sensor measurement, the combination of two same type sensor inputs – pH/ORP and pH/ORP (analog sensor only), SC and SC, and DO and DO – are available with two sensor modules. Dual sensor measurement offers additional functionalities; calculated data function and redundant system.
Variety of calculated data from two measuring parameters is selectable for each measurement. On the redundant system built on two measuring parameters of two sensor inputs, main output parameter is automatically switched over to the second sensor output in case of the main sensor’s failure condition.
Addition to conventional analog pH/ORP sensors, the analyzer FLXA21 can be connected to Yokogawa’s digital sensor, FU20F pH/ORP SENCOM™ Sensor.
In the FLXA21 Human Machine Interface (HMI), 2-wire type analyzer FLXA21 offers easy touch screen operation and simple menu structure in 12 languages. Menus of display, execution and setting are displayed in a selected language.
The analyzer FLXA21 automatically recognizes the installed sensor module and prepares the necessary menus for right configuration, even for dual sensor measurement.
For immediate measurement, the FLXA21 offers quick setup functionality. The quick setup screen appears when the analyzer is powered. Only a few setups – date/time, language, basic sensor configurations and output – will start the measurement.
The FLXA21 offers the best accuracy in measurement with temperature compensation functionality and calibration functionality. Sensor diagnostics and sensor wellness indication make measurement reliable.
Logbook of events and diagnostic data is a useful information source for maintenance.
For hazardous location, the FLXA21 has approvals of ATEX, IECEx, FM, CSA, NEPSI and KOSHA.

**WARNING - POTENTIAL ELECTRIC SHOCK - HAZARD - SEE USERS INSTRUCTIONS**

1. Ensure the equipment is properly grounded before connecting it to the power supply.

2. Use only the specified power source for the equipment. Do not connect the equipment to a voltage source other than the one indicated on the nameplate.

3. Do not exceed the maximum input voltage specified on the equipment nameplate.

4. Do not remove any protective covers or guards without proper authorization.

5. Do not operate the equipment if any part is damaged or has been modified.

6. Do not operate the equipment if any part is not functioning correctly.

**Specific Conditions of Use**

- When the enclosure of the Analyzer is made of aluminum alloy (FLXA202), and when the Analyzer is used in an explosive atmosphere requiring equipment of Category 1 G or EPL Ga, it must be installed in such a way that, even in the event of rare incidents, an ignition source due to impact or friction sparks is excluded.

- When accessing the display window or other non-metallic parts of the enclosure of FLXA202/FLXA21, take the following measures to minimize the risk of explosion from electrostatic discharge:
  - Avoid any actions that cause the generation of electrostatic charge, such as rubbing with a dry cloth.
  - To avoid electrostatic charge on the operator, earth the operator through a wrist-strap, or operate FLXA202/FLXA21 on the conductive floor, wearing anti-static work clothes and electrostatic safety shoes, or neutralize the operator and FLXA202/FLXA21 by a static elimination bar which has a metal part earthed through a resistor from 100kΩ to 100MΩ.
  - If these measures cannot be taken or static electricity cannot be suppressed, bring a gas detector and make sure there is no ignition capable atmosphere around FLXA202/FLXA21 before the operation.

**Notes:**

1. The associated apparatus must be a linear source.
2. Measuring Module 2 is not necessarily installed. As for ISC module and SENCOM module, only one module is permitted to be installed at a time.
3. Sensor 1 and Sensor 2 may be simple apparatus or intrinsically safe apparatus.
4. WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE USER’S MANUAL.

**Notes:**

1: When a 2nd input is selected, only the same kind of the 1st input is available.
   For example, when a 1st input is "-P1", the 2nd input must be the same "-P1".
   The combination of ISC and ISC is not available. And, the combination of SENCOM sensor and SENCOM sensor is not available, either.

2: These languages are message languages on the analyzer's display.
   One analyzer has English and 11 languages.
   All languages are as follows; English, Chinese, Czech, French, German, Italian, Japanese, Korean, Polish, Portuguese, Russian and Spanish.

3: When an analyzer is used in Japan, it must meet the Japanese Measurement Law.
   Only SI units must be used on the analyzer and its documents in Japan.

4: The universal mounting kit contains the pipe and wall mounting hardware (/U) and the panel mounting hardware (/PM).

5: The type "-CD" is intrinsic safety of FM and CSA, and non-incendive of FM and CSA. Temperature classes are T4.

6: This input is to be come from an analog pH/ORP sensor.

7: When the analyzer is connected with the digital sensor, FU20F pH/ORP SENCOM Sensor, only the following model is available; 2nd input: Without input (-NN)

8: The FLXA21 has other output types of "FOUNDATION Fieldbus" communication (suffix code: -F) and "PROFIBUS PA" communication (suffix code: -P). Refer to GS 12A01A02-71E and GS 12A01A02-72E.

9: The type "-CB" intrinsic safety type of ATEX and IECEx can be used with SENCOM sensor. Temperature class is T4.
   Product registration is done by Yokogawa Taiwan Corporation as an importer in Taiwan.

10: The type "-EG" intrinsic safety type of KOSHA for Korea. Temperature class is T4.

11: The type "-AQ" is General purpose type of EAC with Pattern Approval for Russia.

12: The type "-AR" is General purpose type of EAC for Kazakhstan and Belarus.

### Wiring Diagrams

*1: Use a 2-wire shielded cable with an outside diameter of 6 to 12 mm.

*2: Connect the analyzer to ground. (Class D ground: 100 ohm or less)
   Connect the grounding cable to the terminal of the power module inside.
   Use a cable with an outside diameter of 3.4 to 7 mm for the grounding line.

*3: This line is connected to a distributor or 24V DC power supply.

*4: Terminal numbers for each sensor module are shown below.

*5: Two modules of the same kind of measurement/sensor type can be installed. When measuring inductive
   conductivity or pH/ORP with the SENCOM sensor, only one module can be installed.

*6: The terminal box may be necessary depending on the sensor cable length and the distance between the
   analyzer and the sensor.
   The SENCOM sensor is to be connected directly to the analyzer without a terminal box.

*7: Two outputs, output 1 and output2, of PH201G or SDBT are same signals.
