Model JH11
Isolator (Free Range Type)
(with Square Root Extractor)

GS 77J03H01-01E

■ General

The JH11 is a plug-in type isolator that converts DC current or DC voltage signals into isolated DC current or DC voltage signals.

- Selection of square root extractor, input setting, I/O adjustment, I/O monitoring, and segmental point setting (for custom order only) can be made through a PC (VJ77) or Handy Terminal (JHT200).
- The operation indicating lamp shows the operating status, abnormal setting and the like.
- I/O adjustment can be made using a switch on the front of the JH11 without a setting tool such as Handy Terminal.

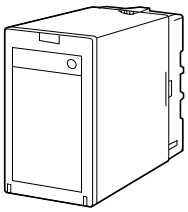
■ Items to be Specified when Ordering

- Model and Suffix Codes: e.g. JH11-14-1AA

Specify a lowcut point when “with square root extractor” is required: e.g. Lowcut point 0.4%



The isolator will be shipped with a lowcut point of 0.6% if no specification of lowcut point.
Specify segmental points (32 points) in Work Sheet when segmental line linearization is required.
The isolator will be shipped with proportional I/O if no specification of segmental points.

Allowable input level:
Voltage input: Within ±15 V DC
Current input:
40mA or less for input resistance of 250Ω

Square Root Extraction Function: Outputted against the result of extracting square root of input.

$$Y=\left(\sqrt{\frac{\text{X- (input 0 \% value)}}{\text{input span}}}\right)\times\text{(output span)+(output 0 \% value)}$$

Lowcut Function: Available only when the square root extraction function is specified.
Setting Range: 0.3 to 100 % of input, setting available by 0.1 % notch
Output for lowcut point or less is cramped with straight line proportional to input.

■ Standard Performance

Accuracy rating:

Input conditions	Accuracy
When the input range is between -2.5 and +2.5V DC, and the span is 1V or more	±0.1% of span
When the input range is between -2.5 and +2.5V DC, and the span is less than 1V	$\frac{(0.1\ [\%] \times 1\ [\text{V DC}])}{\text{Input span [V DC]}}$ [%]
When the input range is between -10 and +10V DC, and the span is 4V or more	±0.1% of span
When the input range is between -10 and +10V DC, and the span is less than 4V	$\frac{(0.1\ [\%] \times 4\ [\text{V DC}])}{\text{Input span [V DC]}}$ [%]

When current input, apply [input range × input resistance] to the above, and add the resistance error of ±0.1%.
Accuracy is not guaranteed for output levels less than 0.1mA for the output codes D, E, and F, and for output levels less than 0.0125mA for the output code G. ±1% of span for the input from 1% to 2% when using square root extractor
