# General Specifications 

## General

The JH12 is a plug-in type isolator that converts DC current or DC voltage signals into isolated DC current or DC voltage signals.

- Selection of square root extractor, input setting, I/O adjustment, I/O monitoring, and segmental point setting (for custom order only) can be made through a PC (VJ77) or Handy Terminal (JHT200).
- The operation indicating lamp shows the operating status, abnormal setting and the like.
- I/O adjustment can be made using a switch on the front of the JH12 without a setting tool such as Handy Terminal.
