1. Introduction

This user's manual provides instructions on the usage of "FSA130 Magnetic Flowmeter / Vortex Flowmeter Verification Tool" and the operation of "Magnetic Flowmeter Verification Tool".

The Magnetic Flowmeter Verification Tool is a software tool for health check of the ADMAG TI Series AXG/AXW magnetic flowmeter and magnetic flowmeter CA series of HART communication type. The functions of the tool are incorporated in the DTM file of the AXG/AXW/ CA magnetic flowmeter, which operates on FieldMate "Versatile Device Management Wizard". Depending on the check items, AM012 "Magnetic Flowmeter Calibrator", CA500 "Multi-Function Process Calibrator", and/or MY600 "Insulation Resistance Tester" are used.

Read the documents in Table 1.1.1 to understand the related products when operating the Verification Tool. The document can be downloaded from the website of YOKOGAWA.

Website address: https://www.yokogawa.com/fld/doc/ https://tmi.yokogawa.com/library/

1.1 About This Manual

- This manual should be provided to the end user.
- Before using the Magnetic Flowmeter Verification Tool, read this manual thoroughly to comprehend its contents.
- The contents of this manual may be changed without prior notice.
- All rights are reserved. No part of this manual may be reproduced in any form without Yokogawa's written permission.
- Yokogawa makes no warranty of any kind with regard to this material, including, but not limited to, implied warranties of merchantability and suitability for a particular purpose.
- If any question arises or errors are found, or if any information is missing from this manual, inform the nearest YOKOGAWA sales office.
- All reasonable effort has been made to ensure the accuracy of the contents of this manual. However, if any errors or omissions are found, please inform Yokogawa.
- · Yokogawa assumes no responsibilities for this product except as stated in the warranty.
- Please note that this user's manual may not be revised for any changes in specifications, construction changes or operating part changes that are not considered to affect function or performance.
- If the customer or any third party is harmed by the use of this product, Yokogawa assumes
 no responsibility for any such harm owing to any defects in the product which were not
 predictable, or for any indirect damages.
- This manual describes the operation of the Magnetic Flowmeter Verification Tool which operates on FieldMate. For the installation, operation, and function of FieldMate, please read the FieldMate user's manual.
- The content of this manual corresponds to FieldMate R3.04.20 and Device Files R3.09.22. Read the manual of FieldMate on how to confirm the revision. Also, read the latest version manual of FieldMate for possible changes in its operation and function.

1.2 Safety and Modification Precautions

- The following general safety precautions must be observed during all phases of operation, service, and repair of this product. Failure to comply with these precautions or with specific WARNINGS given elsewhere in this manual violates safety standards of design, manufacture, and intended use of the product. Yokogawa assumes no liability for the customer's failure to comply with these requirements. If this product is used in a manner not specified in this manual, the protection provided by this product may be impaired.
- Yokogawa will not be liable for malfunctions or damage resulting from any modification made to this product by the customer.
- The following safety symbols are used in this user's manual and on the product.

A WARNING sign denotes a hazard. It calls attention to a procedure, practice, condition or the like, which, if not correctly performed or adhered to, could result in injury or death of personnel.

A CAUTION sign denotes a hazard. It calls attention to a procedure, practice, condition or the like, which, if not correctly performed or adhered to, could result in damage to or destruction of part or all of the product.

An IMPORTANT sign denotes that attention is required to avoid damage to the product or system failure.

A NOTE sign denotes essential information for understanding operations and features.

1.3 Trademarks

- All the brand names or product names of Yokogawa Electric used in this document are either trademarks or registered trademarks of Yokogawa Electric Corporation.
- All the brand names or product names of other companies mentioned in this document are either trademarks or registered trademarks of their respective holders.
- In this manual, trademarks or registered trademarks are not marked with ™ or ®.

1.4 Software License Agreement

IMPORTANT - PLEASE READ THIS AGREEMENT CAREFULLY:

BY INSTALLING OR OTHERWISE USING THIS SOFTWARE PRODUCT FSA130 ELECTROMAGNETIC FLOWMETER / VORTEX FLOWMETER VERIFICATION TOOL, YOU AGREE TO BE BOUND BY THE TERMS AND CONDITIONS OF THIS SOFTWARE LICENSE AGREEMENT ("AGREEMENT").

IF YOU DO NOT AGREE TO THE TERMS AND CONDITIONS OF THIS AGREEMENT, DO NOT INSTALL OR USE THIS SOFTWARE PRODUCT AND PROMPTLY RETURN THE LICENSE NUMBER TO THE PLACE OF PURCHASE.

1 Grant of License

- (1) Subject to the terms and conditions of this Agreement, Yokogawa Electric Corporation ("Licensor") hereby grants to you ("Licensee") a non-exclusive and non-transferable right to use the Verification Tool and associated materials and documentation in printed or electronic format (Collectively "Licensed Software"), in consideration of full payment by Licensee of the license fee separately agreed upon.
- (2) Except as otherwise permitted by the terms of this Agreement or otherwise provided by Licensor, Licensee shall:
 - a) have the right to use the Licensed Software on the environment identified below or other conditions defined by Licensee;
 - In case of use on FieldMate or PRM: the same operating environment condition of FieldMate or PRM.
 - In other cases: the operating environment conditions defined on the readme file of "Yokogawa Device DTM Library" which is contained in the Licensed Software when Licensee download it from Website.
 - b) use the Licensed Software on a single computer by single user at same time;
 - c) use the Licensed Software solely for Licensee's internal operation use. For the avoidance of doubt, unless otherwise agreed or provided by Licensor, Licensee is prohibited to use the Licensed Software on any unauthorized hardware via the network.

2 Warranty

- (1) Licensor warrants that the media on which the Licensed Software is provided is free of defects in materials and workmanship for a period of 90 days from the installation and shall replace the defective media free of charge.
- (2) TO THE MAXIMUM EXTENT PERMITTED BY LAW, LICENSOR DISCLAIMS ALL OTHER WARRANTIES OF ANY KIND, EITHER EXPRESSED OR IMPLIED. INCLUDING, WITHOUT LIMITATION, IMPLIED WARRANTIES OF MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT OF THIRD PARTY RIGHTS. LICENSOR DOES NOT WARRANT THAT THE FUNCTIONS CONTAINED IN THE LICENSED SOFTWARE WILL MEET ANY REQUIREMENTS OR NEEDS LICENSEE MAY HAVE, THAT THE LICENSED SOFTWARE WILL OPERATE ERROR FREE, OR IN AN UNINTERRUPTED FASHION, THAT ANY DEFECTS OR ERRORS IN THE LICENSED SOFTWARE WILL BE CORRECTED, THAT THE LICENSED PRODUCT HAS NO INCONSISTENCY OR INTERFERENCE WITH OTHER SOFTWARE, THAT THE LICENSED PRODUCT OR THE RESULTS ARISING THEREFROM IS PRECISE, RELIABLE OR UP-TO-DATE, THAT THE LICENSED PRODUCT IS COMPATIBLE WITH ANY PARTICULAR SOFTWARE REQUIRED TO RUN THE LICENSED PRODUCT, OR THAT THE LICENSED PRODUCT IS FREE OF VULNERABILITY TO INTRUSION OR ATTACK. SOME JURISDICTIONS DO NOT ALLOW THE WAIVER OR EXCLUSION OF IMPLIED WARRANTIES SO THEY MAY NOT APPLY TO LICENSEE.

3 Terms

The license fee paid by the Licensee in relation to the Licensed Software hereunder shall be non-refundable unless otherwise expressly provided herein.

4 Reference

Unless otherwise provided in this Agreement, the DTM Library Software License Agreement provided by Licensor or accompanying the DTM Library Software ("DTM Library Agreement") shall apply to the license of the Licensed Software mutatis mutandis, as if the Licensed Software were the DTM Library Software. If there are any inconsistencies between this Agreement and DTM Library Agreement, this Agreement shall prevail.

1.5 Package

Checking the Contents of the Package:

Open the package of "FSA130 Magnetic Flowmeter/Vortex Flowmeter Verification Tool License Number" and check the following prior to use. If some items are missing, or there is a problem with the appearance, contact the place of purchase.

Contents of the package:

- License Sheet
- USB FieldMate Modem (when optional code B is selected)

Note: Read user's manual for FieldMate on the USB FieldMate Modem.

The form of the License Sheet is as below. The "Software License Number" is used to activate the Verification Tool. Read Section 4.1 on how to enter the license number.

2. **General Description**

The Magnetic Flowmeter Verification Tool operates on the FieldMate R3.04.20 or later, and Device Files R3.09.22 or later.

The performance of the AXG/AXW/CA magnetic flowmeter can be verified by checking several items and this tool provides a certificate that the device (the AXG/AXW/CA magnetic flowmeter) is operating properly.

Remote Transmitter • . J AXW4A-00000000000 · .]

Two Verification Modes (Standard and Enhanced):

The Verification Tool has two modes, Standard Verification (referred to as Standard VF) and Enhanced Verification (referred to as Enhanced VF). The former is performed in the device itself, and the latter utilizes other equipment to be connected with the device.

*: VF stands for "Verification".

Data Storage and Report Printing:

This tool stores data of verification result (verification data) in a database in an organized manner, and can be used to print a Verification Report that has not only the individual check item result but also the overall status of "Passed" or "Failed".

2.1 System Configuration

The following products, instruments and software are necessary to use the Verification Tool.

- ADMAG TI series AXG/AXW magnetic flowmeter or magnetic flowmeter CA series of HART communication type
- PC (with software below)
 - FieldMate (Versatile Device Management Wizard) R3.04.20 or later, and Device Fiels R3.09.22 or later.
- Printer (for printing verification report)
- USB FieldMate Modem

*:

- AM012 calibrator for magnetic flowmeter (for Enhanced VF)
- CA500 Series Multi-Function Process Calibrator or equivalent(*) (for Enhanced VF)
 - *: CA500 can be replaced by a general purpose instrument which has equivalent function to measure current value / pulse count and also to output current signal.
- MY600 Insulation Resistance Tester or equivalent (*) (for Enhanced VF)

MY600 can replaced by other instrument which has equivalent function.

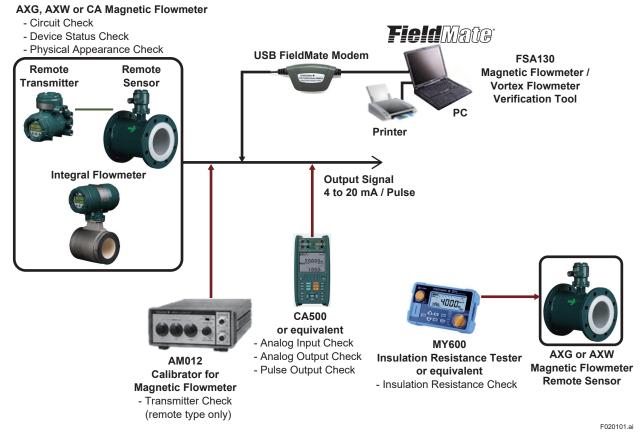

Figure 2.1.1 System Configuration

2.2 Check Item

The Verification Tool has two modes, the Standard Verification (Standard VF) and Enhanced Verification (Enhanced VF). It is always necessary to perform the Standard VF to obtain the overall verification result. See Table 2.2.1 for the whole check items.

1) Standard VF

This mode checks the status of magnetic, excitation, and calculation circuit of the device. It also checks the status of alarm occurrence, alarm history, cable connection status for flow signal and excitation current, display board and LCD, and physical appearance of the device. This mode is performed with the AXG/AXW/CA magnetic flowmeter being mounted onto process line filled with fluid.

2) Enhanced VF

This mode checks analog input/output, pulse output, transmitter accuracy, and insulation resistance of the coil and signal electrodes for further device diagnosis.

This mode is performed with the AXG/AXW/CA magnetic flowmeter being demounted from process line.

The necessary equipment is an AM012 calibrator to simulate the flow velocity signal for magnetic flowmeter, a CA500 Series Multi-Function Process Calibrator to measure current value and pulse count, and also to output current signal, and an MY600 insulation resistance tester to measure the coil and electrode resistance. The CA500 and MY600 can be replaced by other instrument which has equivalent function.

Mode		Check Item	Note
Standard	Circuit	Magnetic Circuit	
Verification		Excitation Circuit	
		Calculation Circuit	
	Device Status	Alarm Occurrence	
		Alarm History	
	Connection Status (*4)	Cable Connection Status	
	Indicator /B Check	Indicator Status (Display Status)	
	(Display Board Check) (*1)	LCD display	Visual check by customer on LCD test mode
	Physical	Flow Sensor	
	Appearance	Transmitter	Visual check by customer
Enhanced	Analog Output (*2)	·	
Verification	Pulse Output (*2)		Check by using CA500 or equivalent
	Analog Input (*2) (*4	4)	equivalent
	Transmitter (*3) (*4))	Check by using AM012
	Insulation	Coil	Check by using MY600 or
	Resistance (*3) (*4)	Signal (Electrode)	Check by using MY600 or equivalent

Table 2.2.1 Check Item

*1: For AXG/AXW/CA magnetic flowmeter with no display, this item does not appear on the Tool.

*2: Input/Output items which are not equipped with AXG/AXW/CA magnetic flowmeter are not displayed on the Tool.

*3: For integral type AXG/AXW magnetic flowmeter, these items do not appear on the Tool.

*4: For CA magnetic flowmeter, these items do not appear on the Tool.

2.3 **Operation Procedure**

The verification procedure starts by activating the Verification Tool function in DTM file operating on the FieldMate. Note that "Default" mode (read section 5.1) cannot be selected when activating the Verification Tool by Device Navigator.

There are two verification mode, Standard VF (read section 7.1) and Enhanced VF (read section 7.2). Always perform at least Standard Verification to get the overall verification result.

See the figure below for the operation procedure.

The number in the figure shows the chapter or section to be referred to.

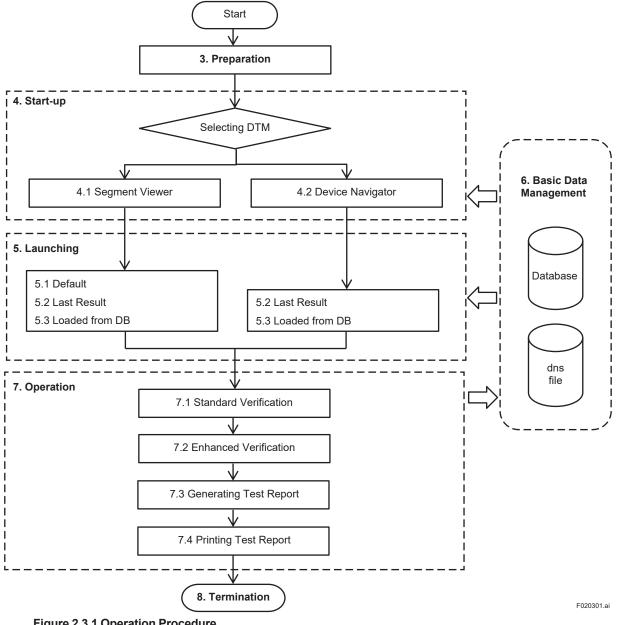

Figure 2.3.1 Operation Procedure

If you interrupt the verification tool execution and once finished, please refer to chapter 6.1 and save the data to save the results until the interruption.

3. Preparation

- Before operating the Verification Tool, the control loop must be set to manual mode in the host system.
- The following applications may cause inaccurate verification results:
 - Significantly low flow rate
 - Slurry fluid
 - Stray current
- When "unexpected issue (*1)" occurs while operating Verification Tool, follow Section 8.2 and Chapter 9.
- · Set the automatic sleep mode of the computer off.
- *1: "Unexpected issue" means disconnection between the AXG/AXW/CA magnetic flowmeter and PC:
 - Physical disconnection between the AXG/AXW/CA magnetic flowmeter and PC
 - Forced shutdown of PC
 - Unforeseen power-off of the AXG/AXW/CA magnetic flowmeter

3.1 Installation of FieldMate

Read the manual for FieldMate including connection with the device. Bu sure to install DTM files of the AXG/AXW/CA magnetic flowmeter for HART communication in the installation procedure. If your FieldMate package does not include these DTM files, download them from the following website.

https://www.yokogawa.com/library/documents-downloads/software/yokogawa-dtm-hart/

3.2 Disabling Write Protect Setting

Before performing verification, set the hardware write protection function switch of the device OFF if it is set to ON. Follow the installation manual of the AXG/AXW/CA magnetic flowmeter shown in 1.Introduction Table1.1.1 for the procedure.

If this was not done, the following window will appear during verification. Then set the hardware write protection switch OFF and click "OK" in Figure 3.2.1.

Also, if the software write protection function is enabled, the following window will appear during verification. In this case, enter the password for disabling the protection in the Password field of Figure 3.2.1, which has been set by customer, and click "OK".

It is not necessary to disable the software write protection function in advance. By entering the password at the time the following window appears, the protection is automatically enabled again within 10 minutes after the verification is finished.

Write Protect Status is set to YES
* If hardware switch is set to "Protected", change to "Enable". <u>View diagram</u>
and
* If Software is Password protected, enter the software password (8 characters).

4. Start-up

The Verification Tool is one of the functions incorporated in the DTM operatable on the FieldMate.

There are two ways as below in the FieldMate to start up the verification Tool in the DTM.

- From "Segment Viewer"
- From "Device Navigator"

If the device is not connected with a PC where FieldMate is operating, the verification function cannot be performed. However, it is available to view verification data performed in the past when starting up the Verification Tool from "Device Navigator".

- To operate the Verification Tool in "online" mode of FieldMate, start up DTM from Segment Viewer.
- To perform the Standard VF, start up DTM from Segment Viewer
- Starting from Segment Viewer is available only when the device is connected. Device Navigator can be used to read past data even if the device is not connected.

4.1 Start-up from "Segment Viewer"

Step 1: Start up the FieldMate and select "Segment Viewer" window.

6. Basic Data Management

This chapter describes basic management on saving, loading, and locking verification data, prior to the description on the operation of Verification Tool in the following chapter.

6.1 Saving Verification Data

There are two ways to save verification data.

One is saving to database. The other is saving as "dns" format file.

Refer to manuals on FieldMate for the database and "dns" format file.

6.1.1 Saving to Database

Step 1: Click "Device" menu and select "Offline Parameter" from the menu window of the Verification Tool.

6.2 Loading Verification Data

There are two ways to load verification data.

One is loading data during starting up the DTM. The other is loading data after starting up the DTM.

Refer to manuals on FieldMate for the database.

6.2.1 Loading during Starting Up DTM

- Step 1: Select "Load from Database" in the window below which appears during starting up DTM.
- Step 2: Select data from the list.
- Step 3: Click "OK".

Display D	TM data of same device n	nodel

Step 6: Click "Yes".

Â	Communication with the device will temporarily pause. Current instance of DTM will be unloaded and reloaded with the selected data. Do you wish to continue?
	6 Yes No

Figure 6.2.4 Loading from database

Step 7: Select data to load.

Step 8: Click "OK".

9-19-5 F - 5-	n Database DTM data of same device	model	
Reason	Date/Time	DTM Name	DTI
VF_DATA	1 8/12/2016 3:15:20 PM	AXG4A FDT2.0 HART7 DTM	YO
4	111		

When the data was loaded while the Verification Tool was already operating, it is necessary to restart the Verification Tool again to make the loaded data effective.

Click "X" on the "Verification tool" tab to finish. Refer to Step 5 of Section 4.1 (Start-up from "Segment Viewer") or Section 4.2 (Start-up from "Device Navigator") for restart procedure.

6.3 Locking Verification Data

Verification data can be locked so that it cannot be edited. To lock the data, select "ON" button at "Data Lock" as shown in the window below. Click "OK" and the buttons except for "Generate Test Report" are disabled, making it impossible to edit the data.

Figure 6.3.2 Locked Verification Data

7. Operation

This chapter describes how to use this Verification Tool.

The figure below shows general procedure of the verification. The number in the figure shows the section to be referred to. Perform the Standard VF at first. Then perform the Enhanced VF if necessary. After that, the test report can be generated and printed out. The test report shows "Overall Status".

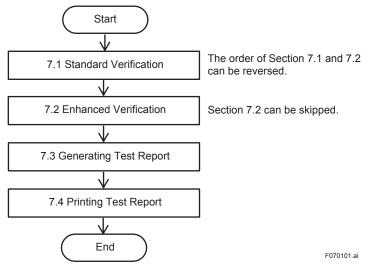

Figure 7.1.1 General Procedure of Verification

- Be sure to always perform Standard VF because "Overall Status" in the verification report is generated only when "Standard VF" is being completed. If not being completed, "Overall Status" is not indicated.
- The verification report can be generated and printed even when "Standard VF" is not being completed.

7.1 Standard Verification

🛕 IMPORTANT

Do not turn off the power for the AXG/AXW/CA maginetic flowmeter at least for 10 minutes after finishing the verification. If you turn the power off immediately, some of the parameters may be changed to different values from ones before performing the verification.

- If Verification Tool turns to "offline" mode due to wiring disconnections, reconnect FieldMate and the AXG/AXW/CA magnetic flowmeter. Verification Tool will be restored to "online" mode again.
- Fill the inside of the AXG/AXW/CA pipe with fluid. If it is not in the full state, the result may not be accurate.

The figure below shows the procedure of the Standard VF. The number in the figure shows the chapter or section to be referred to.

The order in which the tests are performed can be freely determined.

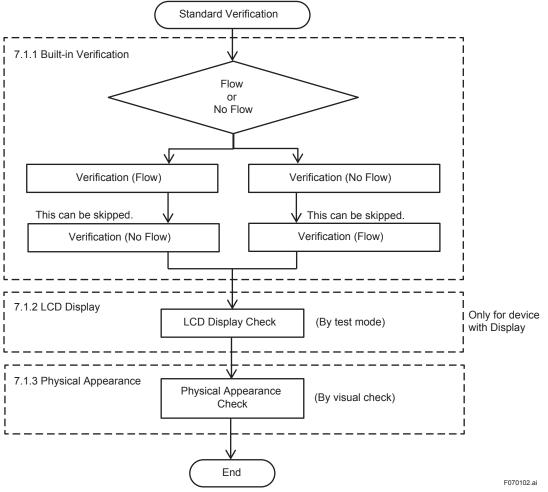

Figure 7.1.2 Procedure of Standard Verification

Click "Start Verification" in the window below to start the Standard VF.

Figure 7.1.3 Starting Standard Verification

7-3

7.1.1 Built-in Verification Check

The Verification Tool utilizes the "Built-in Verification" function of the AXG/AXW/CA magnetic flowmeter as a part of the Standard VF.

It checks the circuits (of magnetic field, excitation, and calculation), device status (alarm occurrence), wiring connection status (of signal and excitation cables), and the status of indicator / display board. Note that it takes approximately 15 minutes (approximately 6 minutes for a CA model) to complete this part.

The verification here is performed in two statuses. One is the status in which the fluid is flowing in the AXG/AXW/CA magnetic flowmeter. The other is the status in which the fluid is not flowing, which means the flow velocity is zero. Either of them can be performed first.

Step 1: If the fluid is flowing, click "1. Flow". If not flowing, click "1. No Flow".

- Step 4: Below is an example showing the result, "Passed" (operating properly) or "Failed" (not operating properly) for each item.
- Step 5: Click "Next" and the verification continues with the other status ("Flow" or "No Flow") which was not selected at first. Continue from Step 2 for the other status.

Step 6: Click "Skip" to finish the procedure in this subsection.

Figure 7.1.8 Example of Verification Result

7.1.2 LCD Display Check

7.1.1 Built-in verification checks the display status, but here the LCD display is checked.

Step 1: When skipping this check, check "N/A" and go to Step 4.

Step 2: Click "Start LCD Test" to check the LCD display.

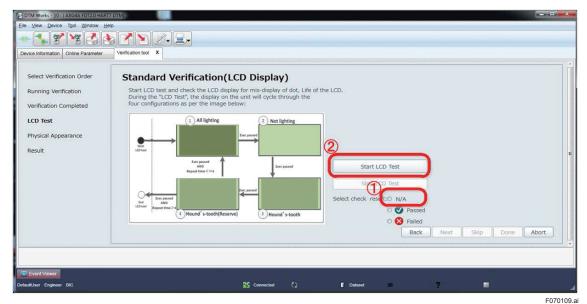

Figure 7.1.9 Starting LCD Display Check

- Step 3: If the LCD display is cycling through the four configurations (all lighting, not lighting, hound's tooth, and reversed hound's tooth) as per the image below, select "Passed". If not, select "Failed". The image changes at a cycle of 2 seconds, making 8 seconds for one round, and continuing 4 rounds for totally 32 seconds.
- Step 4: Click "Stop LCD Test", and Click "Next" to go to the next procedure.

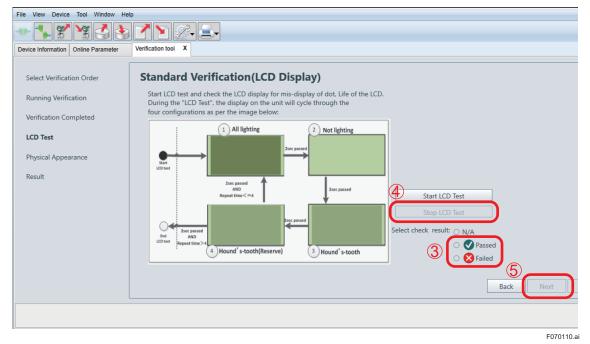

Figure 7.1.10 Judging LCD Display Check

7.1.3 Physical Appearance Check

Check visually the physical appearance of flow sensor, transmitter, and connected cables of the AXG/AXW/CA magnetic flowmeter.

- Step 1: Check visually the physical appearance of flow sensor if it has deformation, damage, corrosion, cracks, wear, or leakage. Select "Passed" if it has no such matters. Select "Failed" if it has any of such matters. Or select "N/A" to skip this check.
- Step 2: Check visually the physical appearance of transmitter if it has damage, corrosion, dews inside the housing, or corrosion on printed-circuit board. Select "Passed" if it has no such matters. Select "Failed" if it has any of such matters. Or select "N/A" to pass this check.
- Step 3: Click "Next" to show the result of the Standard VF.

Figure 7.1.12 Result of Standard VF

IM 01E21A04-01EN

7.2 **Enhanced Verification**

- Before performing the Enhanced VF turn off the power for AXG/AXW/CA magnetic flowmeter and demount it from piping as it is necessary to change its input/output wiring.
- The connection diagram for wiring is displayed when the verification for input/output is performed. However, the diagrams are different depending on the specification of each AXG/AXW/CA magnetic flowmeter model. Note that the diagrams appear in this manual are just examples and follow the actually displayed diagram when wiring.
- If Verification Tool turns to "offline" mode due to wiring disconnections, reconnect FieldMate and the AXG/AXW/CA magnetic flowmeter. Verification Tool will be restored to "online" mode again.

The figure below shows the procedure of the Enhanced VF. The details are in the following subsections. The number in the figure shows the subsection to be referred to.

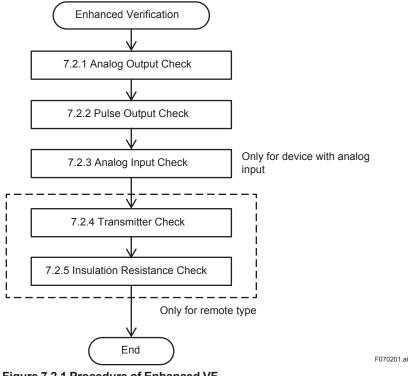

Figure 7.2.1 Procedure of Enhanced VF

NOTE

Note for Entering Result Value:

In the Enhanced VF, you may need to enter the value manually in the result field for "Passed" or "Failed" judgment. In this case, please input the numerical value in the result field and then press the Enter key or click on the Verification Tool window. By doing so, the judgment is carried out and the button for transition to the next window becomes effective.

7.2.1 Analog Output Check

The check for analog outputs "AO1" and "AO2" is available. "AO2" is an optional output and only displayed when it is equipped with the AXG/AXW/CA magnetic flowmeter.

Follow the procedure below to check the current output by a measuring instrument (CA500 or equivalent) for each at 4, 12, and 20 mA.

Step 1: Click "Analog Outp

Step 4: Perform wiring connection to the analog input terminals referring to the displayed diagram. Note that the diagram shown below is an example and becomes different depending on the specification of the AXG/AXW magnetic flowmeter. Click "Next" to continue.

Tips on Using CA500 for Analog Input:

When using CA500 Series Multi-Function Process Calibrator as a DC current source, connect its "+" terminal to "lin+" and "-" terminal to "lin-". Also, set a minus value like "-12 mA" to the CA500. Then enter its plus value like "12 mA" in the "Enter input value (mA)" field of the Verification Tool.

7.2.4 Transmitter Check

Follow the user's manual for the AM012 Magnetic Flowmeter Calibrator for correct operation and safe handling.

The accuracy of transmitter is checked using the AM012 calibrator.

The cable connections need to be changed during this check, which must be changed back to the original connection after the check.

For the CA model, this inspection item is not subject to implementation and is not displayed.

Step 1: Click "Transmitter".

Figure 7.2.41 Finishing Transmitter Check

7.2.5 Insulation Resistance Check

The insulation resistance for the excitation coil and signal electrodes is checked, using MY600 insulation resistance tester or equivalent.

For the CA model, this inspection item is not subject to implementation and is not displayed.

Follow the user's manual for the AXG/AXW magnetic flowmeter for correct operation and safe handling.

Before performing this check, make sure that the AM012 calibrator is not connected to the AXG/ AXW magnetic flowmeter.

- When checking the insulation resistance for the signal electrodes, make sure that the
 inside of measuring pipe of the AXG/AXW magnetic flowmeter is empty, the surface of
 signal electrodes are dry, and they have no material adhered to. When checking the
 insulation resistance for the excitation coil, it is not necessary to make the measuring pipe
 empty.
- In case of the submersible use AXG/AXW flowmeter, disconnect wiring at the transmitter side so that the insulation resistance can be measured at the cable terminals.

Step 1: Click "Insulation Resistance.

Figure 7.2.42 Selecting Insulation Resistance Check

- Step 2: To skip the check of insurance resistance for excitation coil, select "N/A" in the "Coil" column. If it is sure that the insurance resistance is over the measurable range, select "Open Loop (O.L.)" in the "Coil" column and then this check can be passed.
- Step 3: Click "Start Verification" to perform the check.

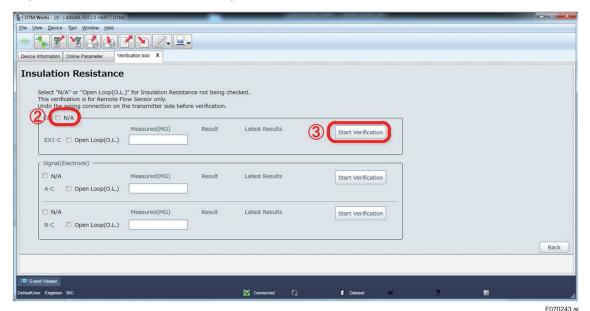

Figure 7.2.43 Starting Insulation Resistance Check

Step 4: A message window is displayed. Read the message and click "Next" to continue.

Figure 7.2.44 Continuing Insulation Resistance Check

Step 5: Measure the resistance value between terminals EX1 and C. Enter the measured value in the "Enter measured value ($M\Omega$)" field. If the measurement result is over the measurement range, enter the maximum value of the range, or go back to Step 2 and select "Open Loop (O.L.)" in the "Coil" column.

Step 6: Click "Done" to continue.

Figure 7.4.4 Sample of Verification Report

8. Termination

This chapter describes "Normal Termination" and "Unexpected Termination".

🛕 IMPORTANT

Make sure to keep the power for the AXG/AXW/CA magnetic flowmeter on at least for 10 minutes after finishing the verification. If you turn the power off immediately, parameters may be changed to different values from ones before performing the verification.

Also, when the software write protection function was disabled following Section 3.2, the protection will automatically become enabled within 10 minutes after finishing the verification. When the hardware write protection function switch was set OFF, set it ON again after 10 minutes or more from the finish of the verification.

8.1 Normal Termination

Save the verification data if necessary by referring to Section 6.1 before terminating the Verification Tool. Then click "X" on the "Verification tool" tab to terminate this tool.

Figure 8.1.1 Termination of Verification Tool

8.2 Unexpected Termination

If the Verification Tool terminates abnormally, make sure that the AXG/AXW/CA magnetic flowmeter and the FieldMate are connected correctly and restart the Verification Tool.

If there are parameters that have been changed during verification and have not been restored to the values before the verification, the following window is displayed. Refer to Chapter 9 for the list of error messages.

Figure 8.1.2 Recovery from Unexpected Termination

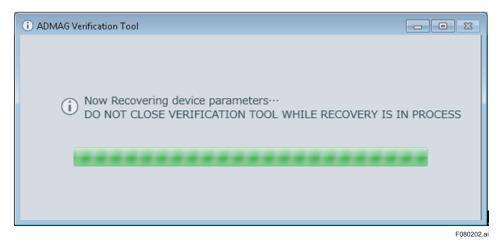

Figure 8.1.3 Progress Bar in Recovery

Step 2: After the recovery, the window below is displayed. Click "OK" to continue.

Figure 8.1.4 Recovery Completed

9. Error Message

Error messages which may appear during verification are listed below. See the following table with error occurrence conditions and countermeasures.

Error Message 1:

Verificatio	n Tool	
8	Connection Error. Check connections and then restart Verification Tool. Press OK to continue.	
		ОК
		F09010

Error Message 2:

Verificati	on Tool	
8	Connection Error. Check connections. Press OK to continue.	
		ОК

Error Message 3:

Verificatio	on Tool	
8	Error occurred during verification. V Check connections and then restart Press OK to continue.	
		OK
		F090103

Error Message 4:

	Verificating. Do		urrent

Error Message 5:

Verificati	ion Tool	
1	Loop current mode is "Disabled". Retry verification after setting Loop current mode to "Enabled".	
	OK	
		F090105

Error Message No	Message	Error Occurrence Condition	Countermeasure
1	Connection Error. Check connections and then restart Verification Tool. Press OK to continue	Restoring parameters while starting up Verification Tool or after restarting up Verification Tool.	Click "OK" in the message window. Then the window of the Verification Tool will be closed. Check the communication connection and restart the Verification Tool.
2	Connection Error. Check connections. Press OK to continue.	Occurrence of communication error while any item of verification was going to start.	Click "OK" in the message window. Then the Standard VF will go back to the window for selecting "Flow" or "No Flow". The Enhanced VF will go back to the starting window of each item to check. Check the communication connection and restart the aborted item to check.
3	Error occurred during verification. Verification has terminated. Check connections and then restart Verification Tool. Press OK to continue.	Occurrence of communication error while any item of verification was going on.	Click "OK" in the message window. Then the window of the Verification Tool will be closed. Check the communication connection and restart the Verification Tool. If the parameter recovery window shown in Section 8.2 appears, click "OK". To display the data before this error, select "Last Result" at "Data load option:" referring to Section 5.2.
4	This device is verifying. Do you want to stop the current verification and to execute the new verification?	Action to start new verification while the built-in verification is being performed.	Click "OK" in the message window. Then abort the verification currently being performed to start the new verification with new settings. Or click "Cancel" and the verification tool will go back to the window for selecting "Flow" or "No Flow".
5	Loop current mode is "Disabled". Retry verification after setting Loop current mode to "Enabled".	Action to start the verification of analog output when the parameter "Loop current mode" is set to "Disabled".	Start the verification of analog output again after setting the parameter "Loop current mode" to "Enabled".

Revision Information

Title: Magnetic Flowmeter Verification Tool Document No.: IM 01E21A04-01EN

Edition	Date	Page	Revised Item
1st	Aug. 2017	-	New publication
2nd	Oct. 2022	-	Added note on Magnetic flowmeter CA Series and AXG1A Changed title
