This book is a manual that extract the contents related to the installation and wiring from the manuals below. There are some differences, but does not affect the safety of the product performance and use.

INSTALLATION AND OPERATING PRECAUTIONS FOR FLAMEPROOF ENCLOSURE “d” CERTIFIED UNDER JAPANESE TYPE CERTIFICATION | 71   |

Revision Information
1. INTRODUCTION

Thank you for purchasing the digital YEWFLO Series Vortex flowmeter. This manual provides the basic guidelines for installation and wiring procedures of integral type vortex flowmeter, remote type vortex flow detector, and remote type vortex flow converter through the communication tool. It does not provide the product specific functional specifications and explanations, maintenance, troubleshooting. For the items which are not covered in this manual, read the applicable user’s manuals on the front page. These manuals can be downloaded from the website of Yokogawa. To ensure correct use of the instrument, read these manuals thoroughly and fully understand how to operate the instrument before operating it. Website address: http://www.yokogawa.com/fld/doc/

■ Regarding This Manual

• This manual should be provided to the end user.
• The contents of this manual may be changed without prior notice.
• All rights are reserved. No part of this manual may be reproduced in any form without Yokogawa’s written permission.
• Yokogawa makes no warranty of any kind with regard to this material, including, but not limited to, implied warranties of merchantability and suitability for a particular purpose.
• All reasonable effort has been made to ensure the accuracy of the contents of this manual. However, if any errors or omissions are found, please inform Yokogawa.
• The specifications covered by this manual are limited to those for the standard type under the specified model number break-down and do not cover custom-made instruments.
• Please note that this manual may not be revised for any specification changes, construction changes or operating part changes that are not considered to affect function or performance.
• Yokogawa assumes no responsibilities for this product except as stated in the warranty.
• If the customer or any third party is harmed by the use of this product, Yokogawa assumes no responsibility for any such harm owing to any defects in the product which were not predictable, or for any indirect damages.

■ Safety and Modification Precautions

• The following general safety precautions must be observed during all phases of operation, service, and repair of this instrument. Failure to comply with these precautions or with specific WARNINGS given elsewhere in this manual violates safety standards of design, manufacture, and intended use of the instrument. Yokogawa assumes no liability for the customer’s failure to comply with these requirements. If this instrument is used in a manner not specified in this manual, the protection provided by this instrument may be impaired.
• The following safety symbol marks are used in this manual and instrument.

![WARNING]
A WARNING sign denotes a hazard. It calls attention to procedure, practice, condition or the like, which, if not correctly performed or adhered to, could result in injury or death of personnel.

![CAUTION]
A CAUTION sign denotes a hazard. It calls attention to procedure, practice, condition or the like, which, if not correctly performed or adhered to, could result in damage to or destruction of the product.

![IMPORTANT]
An IMPORTANT sign denotes that attention is required to avoid damage to the instrument or system failure.

![NOTE]
A NOTE sign denotes information necessary for essential understanding of operation and features.
1.1 Using This Instrument Safely

(1) Installation

**WARNING**

- Installation of the vortex flowmeter must be performed by expert engineer or skilled personnel. No operator shall be permitted to perform procedures relating to installation.
- The vortex flowmeter must be installed within the specification conditions.
- The vortex flowmeter is a heavy instrument. Be careful that no damage is caused to personnel through accidentally dropping it, or by exerting excessive force on the vortex flowmeter. When moving the vortex flowmeter, always use a trolley and have at least two people carry it.
- When the vortex flowmeter is processing hot fluids, the instrument itself may become extremely hot. Take sufficient care not to get burnt.
- Where the fluid being processed is a toxic substance, avoid contact with the fluid and avoid inhaling any residual gas, even after the instrument has been taken off the piping line for maintenance and so forth.
- Do not apply excessive weight, for example, a person stepping on the vortex flowmeter.
- Do not open the cover in wet weather or humid environment. When the cover is open, stated enclosure protection is not applicable.
- Before opening the cover, turn off the power and wait for more than 2 minutes.
- All procedures relating to installation must comply with the electrical code of the country where it is used.

(2) Wiring

**WARNING**

- The wiring of the vortex flowmeter must be performed by expert engineer or skilled personnel. No operator shall be permitted to perform procedures relating to wiring.
- When connecting the wiring, check that the supply voltage is within the range of the voltage specified for this instrument before connecting the power cable. In addition, check that no voltage is applied to the power cable before connecting the wiring.

(3) Operation

**WARNING**

- Do not open the cover in wet weather or humid environment. When the cover is open, stated enclosure protection is not applicable.
- Before opening the cover, turn off the power and wait for more than 2 minutes.

(4) Maintenance

**WARNING**

- Maintenance of the vortex flowmeter should be performed by the trained personnel having knowledge of safety standard. No operator shall be permitted to perform any operations relating to maintenance.
- Do not open the cover in wet weather or humid environment. When the cover is open, stated enclosure protection is not applicable.
- Before opening the cover, turn off the power and wait for more than 2 minutes.
- Always conform to maintenance procedures outlined in this manual. If necessary, contact Yokogawa.
- When maintaining the instrument, read user’s manual as listed on the front page. If necessary, contact Yokogawa.

(5) Explosion Protected Type Instrument

**WARNING**

- The instruments are products which have been certified as explosion protected type instruments. Strict limitations are applied to the structures, installation locations, external wiring work, maintenance and repairs, etc. of these instruments. Sufficient care must be taken, as any violation of the limitations may cause dangerous situations. Be sure to read Chapter 10 “EXPLOSION PROTECTED TYPE INSTRUMENT” or Chapter 12 “EXPLOSION PROTECTED TYPE INSTRUMENT FOR FIELDBUS COMMUNICATION TYPE” before handling the instruments. For TIIS flameproof type instruments, be sure to read “INSTALLATION AND OPERATING PRECAUTIONS FOR TIIS FLAMEPROOF EQUIPMENT” at the end of this manual.
1.2 Warranty

- The terms of this instrument that are guaranteed are described in the quotation. We will make any repairs that may become necessary during the guaranteed term free of charge.
- Please contact our sales office if this instrument requires repair.
- If the instrument is faulty, contact us with concrete details about the problem and the length of time it has been faulty, and state the model and serial number. We would appreciate the inclusion of drawings or additional information.
- The results of our examination will determine whether the meter will be repaired free of charge or on an at-cost basis.

- The guarantee will not apply in the following cases:
  - Damage due to negligence or insufficient maintenance on the part of the customer.
  - Problems or damage resulting from handling, operation or storage that violates the intended use and specifications.
  - Problems that result from using or performing maintenance on the instrument in a location that does not comply with the installation location specified by Yokogawa.
  - Problems or damage resulting from repairs or modifications not performed by Yokogawa or someone authorized by Yokogawa.
  - Problems or damage resulting from inappropriate reinstallation after delivery.
  - Problems or damage resulting from disasters such as fires, earthquakes, storms, floods, or lightning strikes and external causes.

- Trademarks:
  - ‘digitalYEWFLO’, ‘DY’, ‘DYA’, ‘DYC’, and ‘BRAIN TERMINAL’ are registered trademarks of Yokogawa Electric Corporation. Company names and product names used in this material are registered trademarks or trademarks of their respective owners.
  - In this manual, trademarks or registered trademarks are not marked with ™ or ®.
2. HANDLING PRECAUTIONS

The digitalYEWFLO Series Vortex Flowmeter are thoroughly tested at the factory before shipment. When these instruments are delivered, perform a visual check to ascertain that no damage occurred during shipment. This section describes important cautions in handling these instruments. Read carefully before using them. If you have any problems or questions, contact your nearest YOKOGAWA service center or sales representative.

2.1 Checking Model and Specifications

The model code and specifications are found on the name plate located on the outside of the case. Check that the model code and specifications match what you have ordered. Be sure you have your model number and serial number available when contacting Yokogawa.

2.2 Transportation and Storage Precautions

If the instrument is to be stored for a long period of time after delivery, observe the following points.

(1) The instrument should be stored in its original packing condition in the storage location.

(2) Select a storage location that fulfil the following conditions:
   • A place where it will not be exposed to rain or water
   • A place subject to minimal vibrations or shocks
   • Temperature and humidity levels should be as follows:
     Temperature: -40 to +80°C
     Humidity: 5 to 100% RH (no condensation)
     The preferred ambient temperature and humidity levels are +25°C and approximately 65% RH.

(3) If the digitalYEWFLO vortex flowmeter is transferred to the installation site and stored without being installed, its performance may be impaired due to the infiltration of rainwater and so forth. Be sure to install and wire the digitalYEWFLO vortex flowmeter as soon as possible after transferring it to the installation location.

(4) The vortex flowmeter is a heavy instrument. Be careful that no damage is caused to personnel through accidentally dropping it, or by exerting excessive force on the vortex flowmeter. When moving the vortex flowmeter, always use a trolley and have at least two people carry it.

*1) K factor at +15°C
*2) The product - producing country.
3. INSTALLATION

WARNING

This instrument must be installed by expert engineer or skilled personnel. The procedures described in this chapter are not permitted for operators.

3.1 Installation Precautions

(1) Ambient Temperature

Avoid an area which has wide temperature variations. When the installation area is subjected to heat radiation from process plant, ensure adequate heat prevention or ventilation.

(2) Atmospheric Conditions

Avoid installing the vortex flowmeter in a corrosive atmosphere. When the vortex flowmeter must be installed in a corrosive atmosphere, adequate ventilation must be provided.

(3) Mechanical Shock or Vibration

The vortex flowmeter is of sturdy construction, but select an area subject to minimize mechanical vibration or impact shock. If the flowmeter is subject to vibrations, it is recommended that pipeline supports to be provided as shown in Figure 3.1.

(4) Precautions Regarding Piping

(a) Ensure that the process connector bolts are tightened firmly.

(b) Ensure that no leak exists in the process connection pipeline.

(c) Do not apply a pressure higher than the specified maximum working pressure.

(d) Do not loosen or tighten the flange mounting bolts when the assembly is pressurized.

(e) Handle the vortex flowmeter carefully when measuring dangerous liquids, so that the liquids do not splash into eyes or on face. When using dangerous gases, be careful not to inhale them.

(5) Other Considerations

- Choose a location where is sufficient clearance around digitalYEWFLO exist to allow such work as routine inspections.
- Choose a location that ensures easy wiring and piping.

3.2 Piping Precautions

- Straight Pipe Length and Recommendations

Read Table 3.1 about Valve Position and Straight Pipe Length and so on.

- Piping support

Typical vibration immunity level is 1G for normal piping condition. Piping support should be fixed in case of over 1G vibration level.

- Installation direction

If a pipe is always filled with liquids, the pipe can be installed vertically or at inclined angle.

- Adjacent pipes

The process pipeline inner diameter should be larger than the digitalYEWFLO inner diameter. Use the following adjacent pipe.

<table>
<thead>
<tr>
<th>Model Code</th>
<th>Adjacent Pipe</th>
</tr>

D: Nominal diameter (mm)

<table>
<thead>
<tr>
<th>Description</th>
<th>Figure</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Fluid vibration:</strong> For a gas line which uses a position-type or roots-type blower compressor or a high-pressure liquid line (about 1MPa or more) which uses piston-type or plunger-type pump, fluid vibrations may be produced. In these case, install valve on the upstream side of digitalYEWFLO. For inevitable fluid vibration, put a vibration damping device such as throttling plate or expansion section in the upstream side of digitalYEWFLO.</td>
<td><img src="image1" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>Piston-type or plunger pump:</strong> Install the accumulator on the upstream side of digitalYEWFLO to reduce fluid vibrations.</td>
<td><img src="image2" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>Valve position (T-type piping exist):</strong> When pulsation causes by a T-type piping exist, install the valve on the upstream of the flowmeter. Example: As shown in the figure, when the valve V1 is turned off, the fluid flow through B as to meter A the flow is zero. But due to the pulsating pressure is detected, the meter is zero point become fluctuating. To avoid this, change the valve V1 location to V1’. Note: In case of the Reduced Bore Type, moisture may be remained upstream of the flowmeter. Drain it appropriately.</td>
<td><img src="image3" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>Pressure and Temperature Taps:</strong> When the temperature/pressure correction, place a pressure tap in a position on the downstream side 2 to 7D from digitalYEWFLO. Then place a temperature tap in a position on the downstream side 1 to 2D from a pressure tap. When use a temperature tap only, place it in a position on the downstream side 3 to 9D from digitalYEWFLO.</td>
<td><img src="image4" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>Mounting Gasket:</strong> Avoid mounting gaskets which protrude into the pipe line. This may cause inaccurate readings. Use the gaskets with bolt holes, even if digitalYEWFLO is the wafer type. When using a spiral gasket (without bolt holes), confirm the size with the gasket -manufacturer, as standard items may not be used for certain flange ratings.</td>
<td><img src="image5" alt="Diagram" /></td>
</tr>

<tr>
<td><strong>Heat-Insulation:</strong> When an integral-type flowmeter or a remote type detector is installed and the pipe carrying high-temperature fluids is heat-insulated, do not wrap adiabatic materials around the installation the bracket (DY015 to DY100) or the nozzle (DY150 to DY400) of the converter. Note: Read Section 3.4 &quot;Cryogenic and High Process Temperature Version Insulation&quot; and install it rightly.</td>
<td><img src="image" alt="Heat-Insulation Diagram" /></td>
</tr>
</tbody>
</table>

**Flushing of the pipe line:**
Flush and clean scale, incrustation and sludge on the inside of pipe for newly installed pipe line and repaired pipe line before the operation. For flushing, the flow should flow through bypass-piping to avoid damaging the flowmeter. If there is no bypass-piping, install short pipe instead of the flowmeter.

---

**Mounting Precautions**

**WARNING**
In case of high process temperature, care should be taken not to burn yourself because the surface of body and case reach a high temperature.

**(1) Gas or Steam Measuring Precautions**
- Piping to Prevent Standing Liquid
  Mount digitalYEWFLO in a vertical pipeline to avoid liquid traps. When digitalYEWFLO is installed horizontally, raise that part of the pipeline in which the digitalYEWFLO is installed.

---

**(2) Liquid Measurement Precautions**
To insure accurate measurement, the digitalYEWFLO must always have a full pipe.
- Piping Requirements for Proper Operation
  Allow the flow to flow against gravity. When the flow is moving with gravity, lift the downstream pipe length above the digitalYEWFLO installation level to maintain full pipeline.
• Piping for Avoiding Bubbles
Flows containing both gas and liquid cause problems. Avoid gas bubbles in a liquid flow. Piping should be carried out to avoid bubble generation.
Install the valve on the downstream side of the flowmeter because pressure drop across the control valve may cause gas to come out of the solution.

(4) Pipeline Diameter and digitalYEWFLO
The process pipeline inner diameter should be slightly larger than the vortex flowmeter inner diameter, schedule 40 or lower pipe should be used for 1/2 to 2 inch flowmeters and schedule 80 or lower pipes for 3 to 16 inch flowmeters.

(5) Waterproof Construction
The vortex flowmeter is of IP67, Type 4X, JIS C 0920 watertight protection. However, it cannot be used under water.

3.3 Maintenance of Piping

(1) Pipe cleaning
• Flushing of pipe line (Cleaning)
Flush and clean scale, incrustation and sludge on the inside of pipe wall for newly installed pipe line and repaired pipe line before the operation.
• Fluid Carrying Solids
Do not measure fluids that carry solids (e.g. sand and pebbles). Make sure users periodically remove solids adhering to the vortex shedder.
• Obstruction of flow fluids may cause to make a chemical reaction and the fluid will be crystallized and hardened, and be deposited on the pipe wall and shedder bar.
In those cases, clean shedder bar.

(2) Bypass piping
Bypass piping is convenient for the maintenance of digitalYEWFLO (vortex shedder cleaning, etc.).
3.4 Cryogenic and High Process Temperature Version Insulation

When you are using Cryogenic and High Process Temperature version of digitalYEWFLO Vortex Flowmeter (Option code: /HT, /LT), read following contents.

- **Installing Cryogenic Version**
  For cryogenic applications, use stainless steel mounting bolts and nuts to install the flowmeter. These can be ordered separately from YOKOGAWA. Cover the flowmeter body with heat insulating material so that the flowmeter can be maintained at ultra-low temperatures.

- **Maintenance for Cryogenic Applications**
  Option code: /LT uses special materials that produce vortex flowmeter for cryogenic applications. When you are replacing a shredder bar, specify Cryogenic Version shredder bar. To avoid condensing in the terminal box, ensure that the wire connecting port is well sealed.

- **Installing High Process Temperature Version**
  Installation of the flowmeter is the same as the standard type. Cover the flowmeter body with heat insulating material following instruction of “CAUTION”.

- **Maintenance for High Process Temperature Applications**
  Option code: /HT uses special materials that produce vortex flowmeter for High Process Temperature applications. When you are replacing a shredder bar or a gasket, specify High Process Temperature Version.

3.5 Mounting Procedures

- **WARNING**
  The Vortex Flowmeter is a heavy instrument. Please be careful to prevent persons from injuring when it is handled.

Before installing the instrument verify the following. The direction of flow should match to the arrow mark on the instrument body. When changing the orientation of the terminal box, read IM 01F06A00-01EN Chapter 11 “MAINTENANCE.”

1. Installation of Vortex flowmeter of the wafer and flange type is shown in Table 3.3. When installing the wafer type vortex flowmeter, it is important to align the instrument bore with the inner diameter of the adjacent piping. To establish alignment, use the four collars supplied with the instrument.
• Four collars are supplied for 1/2 inch (15mm) to 1-1/2 inch (40mm), 2 inch of JIS 10K or ANSI class 150, and 3 inch of ANSI class 150. Install the instrument as illustrated in Table 3.3.
• If the adjacent flanges have eight bolt holes, insert the stud bolts in the holes on the instrument shoulder.
• Stainless steel stud bolts and nuts are available on order. When they are to be supplied by the user, read Table 3.2 for stud bolt length. Gaskets must be supplied by the user.

2. Avoid mounting gaskets which protrude into the pipeline. This may cause inaccurate readings. Use gaskets with bolt holes, even if digitalYEWFLO is of the wafer type. When using a spiral gasket (without bolt holes), confirm the size with the gasket-manufacturer, as standard items may not be used for certain flange ratings.

</tbody>
</table>

**WARNING**
The inside diameter of the gasket must be larger than the pipe inner diameter so that it will not disturb the flow in the pipeline.

**WARNING**
When installing the Flowmeter vertically in the open air, change the electrical connection port direction to the ground. If the electrical connection port is installed upwards, rain water might leak in.

**WARNING**
In case of vertical installation, two collars in the upper part might move after the installation. But it doesn't influence the performance, please use the flowmeter under such condition.

When Installation Collars are not required, the installation vortex flowmeters applied to the following line sizes and flanges.

<table>
<thead>
<tr>
<th>Size mm (inch)</th>

</tr>
</tbody>
</table>

(1) Insert two collars on each two bolts of bottom side of the flowmeter.
(2) Fit the flowmeter body to the collars. And tighten the four bolts and nuts uniformly.
(3) Check for leakage from the flange connections.

(1) Insert two stud bolts in the bolt holes on the flowmeter shoulder to align the instrument body with the inner diameter of the adjacent piping.
(2) Tighten all bolts uniformly and check that there is no leakage between the instrument and the flanges.

<td></td>
</tr>
</tbody>
</table>
3.7 Indicator Removal and Rotation

**IMPORTANT**

For Explosion protected type, modification by the user is prohibited. It is prohibited to add or remove the indicator.

**CAUTION**

- For flameproof type, move vortex flowmeter to non-hazardous area firstly, then remove and rotate the indicator. The instrument must be restored to its original condition.
- For flameproof type, when you open the cover, turn the locking screw to the right and unlock. When you close the cover, be sure to turn the locking screw to the left and lock.
- For TIIS flameproof type, read “INSTALLATION AND OPERATING PRECAUTIONS FOR TIIS FLAMEPROOF EQUIPMENT” at the end of this User’s manual.

1. Turn the power off.
2. Remove the cover.
   - In case of the Explosion protected type, remove the cover after unlock the Locking Screw.
3. For the indicator, disconnect the cable connector from the amplifier unit.
4. Loosen the two indicator mounting screws using a Phillips screwdriver.
5. Pull out the indicator.
6. Reinstall the indicator in the reverse order to its removal (above) and secure the mounting screws.

![Figure 3.2 Removing and Reinstalling the Indicator](F0316.ai)

3.8 Amplifier Unit Removal

**IMPORTANT**

Do not turn the amplifier unit for removal or assembling. The connector pins may be damaged.

1. Turn the power OFF.
2. Remove the converter cover.
   - In case of the Explosion protected type, remove the cover after unlock the Locking Screw.
3. Remove the indicator according to the procedures described in Section 3.7 “Indicator Removal and Rotation.”
4. Loosen the terminal screws and remove the amplifier unit.

3.9 Amplifier Unit Assembling

**IMPORTANT**

The amplifier unit must be assembled keeping the procedure as follows. Amplifier may not operate normally when the procedure does not keep.

1. Put two Mounting Pins ① into Mounting Holes ②.
2. Push the head of two Mounting Screws ④ lightly.
3. Push head of two IC ⑤ and mount the Amplifier Unit ③.
4. Tighten two Mounting Screws ④.

![Figure 3.3 Removing and Reinstalling the Amplifier Unit](F0317.ai)
4. WIRING

**IMPORTANT**
For the descriptions of wiring for the Fieldbus Communication Type, read Chapter 11 "COMMUNICATION (FIELDBUS)".

**WARNING**
The wiring of the vortex flowmeter must be performed by expert engineer or skilled personnel. No operator shall be permitted to perform procedures relating to wiring.

**CAUTION**
Once all wiring is complete, check the connections before applying power to the instrument. Improper arrangements or wiring may cause a unit malfunction or damage.

### 4.1 Load Resistance of Output Condition

Be sure to observe the following precautions when wiring:

**CAUTION**
- When the ambient temperature of the wire exceeds +60°C, use heat-resistant insulated wire with a maximum allowable temperature more than ambient temperature +30°C or above.
- Do not connect cables outdoors in wet weather in order to prevent damage from condensation and to protect the insulation.
- Do not splice the cable between the flowtube terminal and the converter if it is too short. Replace the short cable with a cable that is the appropriate length.
- All the cable ends must be provided with round crimp-on terminals and be securely wired.
- Be sure to turn power off before opening the cover.
- Before turning the power on, tighten the cover securely.
- Explosion protected types must be wired in accordance with specific requirement (and, in certain countries, legal regulations) in order to preserve the effectiveness of their explosion protected features.
- The terminal box cover is locked by the Locking Screw. In case of opening the terminal box cover, use the hexagonal wrench attached.
- Be sure to lock the cover by the Locking Screw using the hexagonal wrench attached after installing the cover.

Table 4.1 shows the connection method of several output conditions.

**1) Analog Output (4 to 20 mA DC)**
This converter uses the same two wires for both, the signal and power supply. A DC power supply is required in a transmission loop. The total leadwire resistance including the instrument load and power distributor (supplied by the user) must conform to a value in the permissible load resistance range. Read Figure 4.1.
4.2 Selection of Wires

The following should be taken into consideration when selecting cables for use between the converter and distributor.

1. Use 600V PVC insulated wire or equivalent standard wire or cable.
2. Use shielded wire in areas susceptible to electrical noise (both analog and pulse output versions).
3. In areas with high or low ambient temperatures, use wires or cables suitable for such temperatures.
4. In atmospheres where oils or solvents, corrosive gases or liquids may be present, use suitable wires or cables.
5. Use cable which withstand temperature up to +60°C and more, when ambient temperature is more than +60°C.
6. The outer diameter of the screw for grounding terminal and the cable terminal is 4mm.
7. Recommend a crimping terminal with an insulating sleeve (for 4mm screw).

IMPORTANT
For pulse output and the simultaneous analog-pulse output, use the load resistance. Read Table 4.1.

4.3 Connection

Table 4.1 shows the connection sample of connection for power supply and load resistance. The terminal position of each connection is shown in Figure 4.2.
### Table 4.1 (a) The wiring example for the analog and pulse and status, alarm output.

<table>

</tr>
</tbody>
</table>

*1: To avoid the influence of external noise, use an electric counter which fits to the pulse frequency.
*2: Resistor is not necessary in case of an electric counter which can receive contact pulse signal directly.
*4: This flowmeter requires a power supply of greater than or equal to the maximum output current \( E \text{ (V)} / R \text{ (kΩ)} + 25mA. 
*5: 80mA max when you select Option code /KS2, /SS2.
Table 4.1 (b) The wiring example for the simultaneous analog and pulse output, the calculation formula of the range of load resistance \( R \) for the pulse output.

<table>
<thead>
<tr>
<th>Connection</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Simultaneous Analog</strong>&lt;br&gt;<strong>-Pulse Output</strong>&lt;sup&gt;6&lt;/sup&gt;</td>
<td>digitalYEWFLO Electrical Terminal Shielded Cable (AXFC-0)&lt;sup&gt;7&lt;/sup&gt;</td>
</tr>
</tbody>
</table>

**Example 1**<br>In this case, Communication is possible (up to a distance of 2 km when a AXFC-0 cable<sup>7</sup> is used).

**Example 2**<br>In this case, Communication is possible (up to a distance of 200 m when a AXFC-0 cable<sup>7</sup> is used) and \( R = 1 \text{kΩ} \).

**Example 3**<br>In this case, No communication is possible (when shielded cable is not used).

The range of load resistance \( R \) for the pulse output.

\[
\frac{120 (\text{mA})}{E} \leq R (\text{kΩ}) \leq \frac{0.1}{C (\mu\text{F}) \times f (\text{kHz})} \quad \text{(1)}
\]

Example of CEV cable capacitance \( \approx 0.1 \mu\text{F/km} \)

Where

- \( E \) : Supply voltage (V)
- \( C \) : Cable capacitance (µF)
- \( f \) : Frequency of pulse output (kHz)
- \( R \) : Value of load resistance (kΩ)
- \( P \) : Power ratio of the load resistance (mW)

\[
P (\text{mW}) = \frac{E^2 (V)}{R (\text{kΩ})} \quad \text{........................................ (2)}
\]

*1: To avoid the influence of external noise, use an electric counter which fits to the pulse frequency.
*2: Resistor is not necessary in case of an electric counter which can receive contact pulse signal directly.
*3: This flowmeter requires a power supply of greater than or equal to the maximum output current \( E (V) / R (\text{kΩ}) \).
*4: This flowmeter requires a power supply of greater than or equal to the maximum output current \( E (V) / R (\text{kΩ}) + 25 \text{mA} \).
*5: 80mA max when you select Option code /KS2, /SS2.
*6: When using analog and pulse output simultaneously, the HART communication may be influenced by noise comparing analog output only.

**Figure 4.3** AXFC-0 (Read IM 01E20C01-01E)

![AXFC-0 diagram](AXFC-0Diagram.png)

---

*7: AXFC-0 is the dedicated signal cable (without cable end finish) for Yokogawa Magnetic Flowmeter ADMAG AXF series. Read Figure 4.3 for AXF-0.

Other shield cable which is equivalent architecture to AXFC-0 can be used for DY. However the material of insulator may decrease the communication distance.
4.4 Connection of DYC Remote Type Signal Cable

DYC remote type signal cable is shown in Figure 4.4 and Figure 4.5, and the terminal is shown in Figure 4.6.

The maximum cable length is 30 m (97.5 feet). Remove terminal box cover and wiring connection dust-cap before wiring.

For remote type converter has two electrical connections (cable inlets). Use the left connection as viewed from the terminal box for the DYC remote type signal cable and the right connection for the transmission cable.

If a signal cable kit is supplied by YOKOGAWA, both ends of the cable must be finished in accordance with the following instructions. Read Section 4.5 “End Processing Method of DYC Remote Type Signal Cable”.

**CAUTION**

- After completing the signal cable connections, install the shielded cover to signal cable terminal as shown in Figure 4.7.
- To comply with EMC Directive, DYC remote type signal cable shall be in metal conduit piping connection.

---

**Figure 4.4** DYC Remote Type Signal Cable

**Figure 4.5** Construction of DYC Remote Type Signal Cable

<tr>
<td>7. Slide a short piece of heat shrinkable tubing over each of wires A, B, C, and T*1. Install a crimp-on terminal lug at the tip of each wire. Crimp and solder each lug.</td>
<td><img src="F0407.ai" alt="Diagram" /></td>
</tr>
<tr>
<td>8. Slide each short piece of heat shrinkable tubing over the crimp sleeve. Heat all pieces of heat shrinkable tubing with a heat blower or dryer.</td>
<td><img src="F0407.ai" alt="Diagram" /></td>
</tr>
<tr>
<td>9. Attach an identification label to the end of the cable.</td>
<td><img src="F0407.ai" alt="Diagram" /></td>
</tr>
</tbody>
</table>

**NOTE**
Check that the insulation resistance between each wire including the inner shield is 10M or greater at 500V DC. Ensure that both ends of the wires are disconnected (open-circuited) during the check.

(*1): Only for IMV

**CAUTION**
Do not touch the “conductive layer” (black area covering the signal cables A and B) to the converter case, terminal, and other leadwires. If it is touched, operation of the converter may be incorrect. When the cable is terminated, remove the conductive layer properly.

---

---

**Figure 4.9** End Processing Method of DYC Remote Type Signal Cable for Converter
4.6 Wiring Procedures and Precautions

NOTE

Once all wiring is complete, check the connections before applying power to the instrument. Improper arrangements or wiring may cause a unit malfunction or damage.

1. Lay wiring as far as possible from electrical noise sources such as large capacity transformers, motors, and power supplies.
2. Remove the terminal cover and dustproof plug of an electrical connection before wiring. When you open the cover of explosion protected type (*), turn the Locking Screw to the right, and unlock. When you close a cover after wiring, be sure to turn the Locking Screw to the left and lock.
   (*): Flameproof (TIIS, ATEX, IECEx)
3. It recommends using an flexible metal conduit and a duct for waterproofing or external protection of an electric wire. Read Figure 4.10 and Figure 4.11.
4. The flameproof packing adapter (option code: /G11 or /G12) should be used for the external wiring of TIIS Flameproof. Read “INSTALLATION AND OPERATING PRECAUTIONS FOR TIIS FLAMEPROOF EQUIPMENT.”

Figure 4.10 Example of Wiring (Integral Type and Remote Type Detector (DY-N))

Figure 4.11 Example of Wiring (DYA Remote Type Converter)

Figure 4.12 Cable Wiring

NOTE

Be sure to use the flameproof packing adapter (option code: /G11 or /G12) for TIIS flameproof type at the time of cable wiring work. Read Figure 4.13.

Figure 4.13 Flameproof Packing Adapter (option code: /G11, /G12)
Perform attachment of flameproof packing adaptor in the following ways. Read Figure 4.12.

(a) Loosen the locking screw and remove the terminal box cover.

(b) Measure the cable outer diameter in two directions to within 0.1 mm.

(c) Calculate the average of the two diameters, and use packing with an internal diameter nearest to this value. Read Table 4.2.

(d) Screw the flameproof packing adapter into the terminal box until the O-Ring touches the wiring port (at least 6 full turns), and firmly tighten the lock nut.

(e) Insert the cable through the union nut, the B. coupling, the clamp nut, the clamp ring, the packing gland, the washer, the packing, and the packing case, in that order.

(f) Insert the end of the cable into the terminal box.

(g) Tighten the union cover to grip the cable. When tightening the union cover, tighten approximately one turn past the point where the cable will no longer move up and down. Proper tightening is important. If it is too tight, a circuit break in the cable may occur; if not tight enough, the flameproof effectiveness will be compromised.

(h) Fasten the cable by tightening the clamp nut.

(i) Tighten the lock nut on the union nut.

(j) Connect the cable wires to each terminal.

Be sure to observe the following precautions when wiring.

(a) Do not connect cables outdoors in wet weather in order to prevent damage from condensation and to protect the insulation.

(b) Do not splice the cable between the flowtube terminal and the converter if it is too short. Replace the short cable with a cable that is the appropriate length.

(c) The signal cables must be routed in separate steel conduit tubes 16 (JIS C 8305) or flexible conduit tubes 15 (JIS C 8309).

(d) Always route the power and output signal cables in separate steel conduit tubes, except when the power supply voltage is 24 V and four-core cables are used for wiring. Keep conduits or flexible tubes watertight using sealing tape.

4.7 Grounding

**IMPORTANT**

When a lightning protector (option code: /A) is selected, use a grounding resistance of 10Ω or less.

(1) The grounding terminals are located on the inside and outside of the terminal area. Either terminal may be used. Read Figure 4.14.

(2) For pulse output version, ground the flowmeter. Also ground the shielded cable between the converter and the pulse receiver.

(3) Grounding should satisfy Class D requirements (ground resistance 100Ω or less).

(4) Use 600V PVC insulated wire for grounding.

Example: Integral Type

![Grounding Terminal](F0415.ai)
5. BASIC OPERATING PROCEDURES (DISPLAY)

Data setting can be performed with the three keys on the front panel (SET, SHIFT and INC) or using a handheld BRAIN TERMINAL (BT200) and HART communicator.

5.1 Display Configuration

Figure 5.1 shows the configuration of the digitalYEWFLO display panel (if equipped).

![Figure 5.1 Display Configuration](F0501.ai)

- **Data Display(Upper)**: flowrate data, setting data, total data, temperature data (°C / °F)
- **Data Display(Lower)**: total data, alarm data, temperature data (°C / °F)
- **Alarm Display**: alarm of a flow error and a vibration error
- **Unit Display**: flowrate unit
- **Setting Keys**: These keys are used to change flow rate data displays and type of setting data

Read IM01F06A00-01EN Section 5.2 for “Display Contents”, Section 5.3 for “Display Mode”, Section 5.4 for “Setting Mode”.
6. PARAMETERS

6.1 digitalYEWFLO Parameters

The parameters are set before factory shipment. Set the required parameter of changing fluid, contact out and indication of display.

6.2 Parameter Configuration

Item A: Indication
Item B: Easy Setting
Item C: Basic Setup
Item D: Additional Setup
Item E: Detector Setup
Item F: Thermometer (Only for Multi-Variable Type)
Item H: Adjust
Item J: Test
Item K: Maintenance
Item M: Memo

⚠️ IMPORTANT

For the remote type, be sure to set the cable length (F52) for DYA remote type converter, because of effect of the cable length.

Read IM01F06A00-01EN Section 6.3 for "Parameter List", Section 6.4 for "Parameter Description".
### 6.3 Self-Diagnostic (Error Code List)

When an ERROR is displayed by SELF CHECK in item A60, B60, C60, D60, E60, H60, J60, K60 or M60, press function key F2 [DIAG] and the error contents are displayed.
This chapter describes the operation procedures using a BRAIN TERMINAL (BT200). For details on the functions of the digitalYEWFLO, read Chapter 6 “PARAMETERS.” And also, read the “Model BT200 BRAIN TERMINAL” Instruction Manual (IM 01C00A11-01E) for more detailed information.

7.1 Connection Method for the BT200

(1) Connecting the BT200 to a 4 to 20mA DC Transfer Line

The communication signal of the digitalYEWFLO is superimposed onto the 4 to 20mA DC analog signal to be transferred.

In case of general type (non-ex) and flameproof type:

In case of intrinsically safe type:

Do not connect the maintenance tool to the field instrument side of the safety barrier, regardless of hazardous or non-hazardous areas.

Figure 7.1 Communicating for a 4 to 20mA DC Signal Line

IMPORTANT

Communication signal is superimposed on analog output signal. It is recommended to set a low-pass filter (approximately 0.1s) to the receiver in order to reduce the output effect from communication signal. Before online-communication, confirm that communication signal does not give effect on the upper system.

IMPORTANT

The communicable distance of the transmission line is restricted depending on the wiring method. Read Chapter 4 “WIRING.”

IMPORTANT

After setting a parameter, keep the power on for at least 30 seconds. If the power of flowmeter is turned off, a parameter setting is released.
(2) Connection of BT200 to Converter
Removing a cover and indicator, the terminals for BRAIN communication are provided on the circuit board.
Connect BT200 to the terminal of HHT-COM on the circuit board.

7.2 Connection Method for the HART Configuration Tool
The HART Configuration Tool can interface with the digitalYEWFLO from the control room, the digitalYEWFLO site, or any other wiring termination point in the loop, provided there is a minimum load resistance of 250 Ω between the connection and the receiving instrument. To communicate, it must be connected in parallel with the digitalYEWFLO, and the connections must be non-polarized. Figure 7.3 illustrates the wiring connections for a direct interface at the digitalYEWFLO site. The HART Configuration Tool can be used for remote access from any terminal strip as well.

In case of general type (non-ex) and flameproof type:

In case of intrinsically safe type:

Do not connect the maintenance tool to the field instrument side of the safety barrier, regardless of hazardous or non-hazardous areas.

Figure 7.3 Connecting the HART Communicator

Read IM 01F06A00-01EN Section 7.2 for “BT200 Screen and Displaying Flow Rate” and Section 7.3 “Setting Parameters using BT200”.
Read IM 01F06A00-01EN Chapter 8 for “OPERATION VIA HART CONFIGURATION TOOL (HART 5)”, Chapter 9 for “OPERATION VIA HART CONFIGURATION TOOL (HART 7)”.

Note: HART is a registered trademark of the HART Communication Foundation (HCF).
8. OPERATION

After you have installed the flowmeter into the process piping, wired the input/output terminals, set up the required parameters, the vortex flowmeter should output an accurate flow signal from its terminals as soon as the measured liquid begins to flow.
This section describes procedure of test method and adjustment method for the pre-operation.

**NOTE**
The initial parameter setting has already been done at the factory according to the sizing data when ordering. Therefore it is not necessary to set parameters except measurement condition changes or some additions happen.

8.1 Adjustment

8.1.1 Zero Adjustment

No zero adjustment is necessary since the zero point does not shift.
Because of the effect of electrical noise and vibration noise, digitalYEWFLO may provide an output even when the flowrate is zero. In that case, properly eliminate the source of the noise. Read Section 8.2 “Adjustment for Manual Mode.”

8.1.2 Span Adjustment

In normal application, you need not confirm the span.
If you need to ensure the output of 4 to 20mA DC, read Subsection 8.1.3 “Loop Test.”

8.1.3 Loop Test

To ensure output of 4 to 20mA DC or pulse, their loop tests can be done using parameter “J10 (Analog out)” or “J20 (Pulse test).”
If you are verifying the analog output, follow the procedure on the verification procedure.
<Check Procedure>
1. Connect the instruments by reading Figure 8.1, and warm up for three minutes more.
2. Set span frequency in Parameter J10:OUT ANALOG.
3. In case the load resistance is 250Ω, digital multimeter indicates 5V. Otherwise if it is known load resistance value, it indicates R (Ω) × 0.02 (A).
4. Check output value is in the rated value (±0.016 mA) after set 50% in Parameter J10.
5. Check output value is in the rated value (±0.016 mA) after set 0% in Parameter J10.

![Figure 8.1 Connection of Maintenance Instruments](F0801.ai)

**IMPORTANT**
- When using any test-purpose measuring instruments, do not ground them.
- All of your parameter settings will be cancelled if you turn digitalYEWFLO off less than 30 seconds after the parameter setup. Keep digitalYEWFLO turned on at least 30 seconds after setting up the parameters.

**NOTE**
When configure the parameters using the HART Configuration Tool, read IM 01F06A00-01EN Section 8.11 “Menu Tree (HART 5)” or IM 01F06A00-01EN Section 9.11 “Menu Tree (HART 7)."
8.1.4 Totalizer Start and Totalizer Reset

When using the Totalizer Function, the start setup should be done.

1) Start operation using BT200
   Enter to B40 (TOTAL START), and move the video bar to “EXECUTE”. Push “ENTER” key at 2 times.

2) Start operation using indicator
   Enter to “Setting mode”, move to B40 of parameter number, and enter to “01” of data number.
   Read Section IM 01F06A00-01EN 5.4 “Setting Mode.”

Totalized value can be reset using the indicator or BT200.

1) Reset operation using BT200
   Enter to B42 (TOTAL RESET), and move the video bar to “EXECUTE”. Push “ENTER” key at 2 times.

2) Reset operation using indicator
   Enter to “Setting mode”, move to B47 of parameter number, and enter to “01” of data number.
   Read IM 01F06A00-01EN Section 5.4 “Setting Mode.”

8.1.5 Setting of Pulse Output (Scaling)

Pulse output are constructed by two units, that are “Scaled pulse and Unscaled Pulse”.

1) Scaled Pulse
When SCALED PULSE is selected in B20, set flowrate per one pulse output. Rate unit is linking to the flow unit.

2) Unscaled Pulse
When UNSCALED PULSE is selected in B20, it outputs the pulse calculated by following formula. The formula for output pulse number is as follows.
   Output pulse number per one second = vortex number per one second / PULSE RATE set number.
   Read IM 01F06A00-01EN Section 11.6 “Flow Calculation.”

- Pulse Rate setting
Pulse rate setting is settable by “B21:PULSE RATE”.

8.1.6 Setting of Burnout Switch

digitalYEWFLO is equipped with a CPU error burnout function used to set the output direction upon CPU error, and a sensor burnout function that sets the direction of the output in the event of burnout of the temperature sensor. When factory-shipment under normal conditions, the output of both CPU error burnout and sensor burnout are set to HIGH, but if option code /C1 is specified, the CPU error burnout is set to LOW(-2.5% below) output, and sensor burnout is set to LOW(-2.5% below) output, respectively. The setting of the direction of output from burnout can be changed. To change the direction of output arising from burnout, switch the setting pin on the CPU assembly (Read Table 8.1).

<table>

<td>-2.5% or less (3.6mA DC)</td>
<td>Set to LOW for option code /C1.</td>
</tr>
</tbody>
</table>

Figure 8.2 Pin position of Burnout and Write Protect Switch
8.1.7 Setting of Write Protect Switch

By setting the write protect function to “Protect”, it is possible to prevent the overwriting of parameters. Write protection can be carried out using either the hardware switch on the CPU board (i.e., Switch 2) or software parameter settings. If either of these items is set to “Protect”, the overwriting of parameters will be prohibited.

**NOTE**

If the hardware switch is set to “Protect”, it will not be possible to overwrite parameters; furthermore, this condition will be maintained until the switch is set to “Enable”.

For more details regarding usage of the write protect function and the software’s parameter switches, read IM 01F06A00-01EN Section 8.9 “Software Write Protect” or IM 01F06A00-01EN Section 9.9 “Software Write Protect.”

<table>

</tr>
<tr>
<td>Y</td>
<td></td>
</tr>
</tbody>
</table>

8.1.8 Power Failure

When a power failure occurs, the totalized value will be protected by EEPROM (Electrically Erasable Programmable ROM). But during a power failure, the vortex flowmeter stops and also the totalizing will stop. After a power is recovered, the vortex flowmeter and the totalizing start to work automatically. EEPROM doesn’t need a battery for backup.

8.2 Adjustment for Manual Mode

digitalYEWFLO does not need the initial adjustment because digitalYEWFLO is always adjusted by itself automatically. These adjustments should be done in case that indicator reads over zero at zero flow.

8.2.1 Low Cut Adjustment

Adjust to noise elimination or zero flow in the low flowrate (or low frequency) range. The settable range for low cut flowrate is to half of minimum flowrate.

8.2.2 Zero Tuning

This adjustment should be done according to a flow figure shown below.

---

**Figure 8.3 Tuning Flow**

If this adjustment is executed, the following value is changed.

- K25:N.B MODE = MANUAL
- K26:NOISE RATIO=Constant value
Minimum flowrate is increased when TLA value is changed form initial value.
1. Tuning method

(1) Ensure the condition of flowrate
The necessary condition for tuning function is zero flow.

(2) Executing the tuning function.
Set “TUNING AT ZERO” of “K25:N.B MODE”.
Wait more 30 second.

(3) Finishing the tuning functions
Using the BT200
(a) Press “DATA” key of BT200 function key.
(b) Ensure the indication of “MANUAL” which is “K25:N.B MODE”
   (“NOW TUNING” is indicated during tuning operation.)
Using the indicator
(a) Press “SHIFT” and “SET” key simultaneously.
(b) Press “SET” key and ensure “01” of Lower indication.
   (“02” is indicated during tuning operation.
   Execute (a), (b) once again.)

2. TLA value
TLA values is possible to change after executing “TUNING”. In this case, minimum flowrate is increased.
Minimum flowrate for TLA value is given by below equation.

\[
\text{Minimum Flowrate after changing TLA Value} = \frac{\text{Specified Minimum Flowrate}}{\sqrt{\text{TLA Value after Tuning} - \text{TLA initial value or default value}}}
\]

Ensure minimum flowrate for changing TLA value.

3. Output
After tuning, ensure that the indication reads is zero where no fluid is flowing.
If the indication reads over zero is done continuously, retry the tuning and ensure the below condition.

Does high vibrations occur in pipeline?
In this case, read Section 3.1 “Installation Precautions”, and keep the pipeline properly.
9. ERRORS AND COUNTERMEASURES FOR DISPLAY UNIT AND BRAIN PROTOCOL

Read IM 01F06A00-01EN Chapter 11 for "MAINTENANCE".

CAUTION

Please avoid replacing the amplifier unit from the case, and the vortex shedder bar. When these procedures are needed, please contact the nearest Yokogawa office.

9.1 Large Errors or Unstable Output

- If a built-in indicator is attached, check the display of the error code.
- Connect a hand-held terminal and check self-diagnostic.

Was a faulty area found with self-diagnosis?

- Yes
- No

Are the parameters configured correctly at operating conditions?

- Yes
- No

Is straight lengths of pipeline stable?

- Yes
- No

Does gaskets protrudes?

- Yes
- No

Is there a snapping sound from the flowmeter?

- Yes
- No

Is digitalYEWFLO properly grounded?

- Yes
- No

Does the value in "K34:VORTEX FREQ." undergo a lot of changes?

- Yes
- No

Check the avitation, read IM 01F06A00-01EN Section 13.4 "Sizing."

Note 1: This is the temperature and pressure at digitalYEWFLO mounted place.

Note 2: Contact with our service in case this is not carried out into the right statement.

9.2 The Indication Goes to Zero at Certain Time

When this problem occurred, the cause is suspected of deterioration of sensor sensitivity and turbulent of fluid flow due to coating on the shedder bar and flowmeter inner tube.

How to cope with this problem

1) Read IM 01F06A00-01EN Section 11.5 "Vortex Shedder Removal," take out the Vortex Shedder bar and clean it.
2) If there is the coating on inner tube of the flowmeter, remove the flowmeter body from adjacent pipes and clean it.
9.3 No Output When The Fluid is Flowing

- If a built-in indicator is attached, check the display of the error code.
- Connect a hand-held terminal and check self-diagnosis.

Was a faulty area found with self-diagnosis?
Yes → Check for recovery measures, read Section 6.3 "Self-Diagnostic (Error Code List)."
No → 

Is the output signal current present?
Yes → Are the power polarities correct?
Yes → Fasten the power terminal.
No → Replace the cable.

No → Replace the AMP unit.

Are parameters configured correctly at operating conditions?
Yes → Is "K34:VORTEX FREQ" 0Hz?
Yes → Configure the parameters correctly.
No → Configure the Low cut value correctly.

No → Is the TLA value configured correctly?
Yes → Configure the TLA value, read Section 8.2 "Adjustment for Manual Mode."

Is the TLA value configured correctly?
Yes → Replace the AMP unit.
No → Configure the density value correctly at operating conditions.

Is the density value configured correctly?
Yes → Replace the AMP unit.
No → Is output indicated when "K25:N.B MODE" is "MANUAL" and "K26:NOISE RATIO" is "0"?

No → Is there broken the sensor?
Yes → Replace the shedder bar
No → Replace the AMP unit.

This case is due to coating of vortex shedder bar. Check the shedder bar piping inner surfaces.
9.4 Output is Indicated at Zero Flow

- If a built-in indicator is attached, check the display of the error code.
- Connect a hand-held terminal and check self-diagnostic.

Was a faulty area found with self-diagnosis?
  - Yes: Check for recovery measures, read Section 6.3 "Self-Diagnostic (Error Code List)."
  - No: Configure the parameters correctly.

Is fluid flowing?
  - Yes: Stop flow.
  - No: Are parameters configured correctly at operating conditions?
    - Yes: Are the load resistance and supply voltage within the tolerance limits?
      - Yes: Adjust to within the tolerance limits.
      - No: Ground digitalYEWFLO.
    - No: Is digitalYEWFLO properly grounded?
      - Yes: Does low cut adjust?
        - Yes: Does the tuning execute?
          - Yes: Does high vibrations occur in pipeline?
            - Yes: Eliminate vibration noise using pipe support.
            - No: Are pulsation produced? Check the pipeline conditions, read Chapter 3 "INSTALLATION."
          - No: Execute the tuning, read Section 8.2 "Adjustment for Manual Mode" 
        - No: Adjust to low cut, read Section 8.2 "Adjustment for Manual Mode" 
      - No: Execute the tuning, read Section 8.2 "Adjustment for Manual Mode" 
    - No: Configure the parameters correctly.
9.5 Multi-Variable Type (MV)

- If a built-in indicator is attached, check the display of the error code.
- Connect a hand-held terminal and check self-diagnostic.

Was a faulty area found with self-diagnostic?

Yes

No

Are the power polarities Correct?

No

Yes

Are the load resistance and supply voltage within the tolerance limits?

No

Yes

Are the sensor connected correctly?

No

Yes

Are the parameters configured correctly at operational conditions?

No

Yes

Read Section 9.1 to 9.4.

Check for recovery measures, read Section 6.3 "Self-Diagnostic (Error Code List)."

Check the polarities.

Adjust to within the tolerance limits.

Check the sensor.

Configure the parameters correctly.
10. EXPLOSION PROTECTED TYPE INSTRUMENT

NOTE

• Read Chapter 12 for Fieldbus Communication Type Intrinsically safe approval.

In this chapter, further requirements and differences for explosion protected type instrument are described. For explosion protected type, the description in this chapter is prior to other description in this User’s Manual.

WARNING

• Only trained persons use this instrument in industrial locations.

CAUTION

• Process temperature and ambient temperature on this section are the specifications for explosion protected type. Read IM 01F06A00-01EN Section 13.1 “Standard Specifications” before operating.

10.1 ATEX

WARNING

• Only trained persons use this instrument in industrial locations.
• Electrostatic charge may cause an explosion hazard.
  Avoid any actions that cause the generation of electrostatic charge, such as rubbing with a dry cloth on coating face of product.

(1) Technical Data

• Flameproof

Electrical data:
Supply and Output Circuit
(SUPPLY + and -, PULSE + and -);
Maximum Input Voltage Ui: 30Vdc
Maximum Input Current Ii: 300mA
(Read Contact rating for pulse output.)
Maximum Input Power Pi: 0.9 W
Internal Capacitance Ci: 14nF
Internal Inductance Li: 0mH
Electrical Connection: ANSI 1/2 NPT female,
ISO M20 X 1.5 female

Special conditions for safe use
• Precautions shall be taken to minimize the risk from electrostatic discharge of painted parts.
• When the enclosure of the flow meter or the converter are made of aluminum, if it is mounted in an area where the use of EPL Ga equipment is required, it must be installed such that, even in the event of rare incidents, ignition sources due to impact and friction sparks are excluded.
• The dielectric strength of at least 500 V a.c. r.m.s. between the intrinsically safe circuits and the enclosure of the flow meter or the converter is limited only by the overvoltage protection.

(2) Installation

WARNING

• All wiring shall comply with local installation requirements and local electrical code.
• Use the suitable heat-resisting cables (over 90°C) for the digitalYEWFLO Series Vortex Flowmeter when the ambient temperature exceeds 60°C and/or the process temperature exceeds 200°C.
• Cable glands and adapters shall be of Ex “d” for Ex “d” installations.
• Cable glands and adapters shall be installed so as to maintain the specified degree of protection (IP Code) of the flowmeter.

The grounding terminals are located on the inside and outside of the terminal area.
Connect the cable to grounding terminal in accordance with wiring procedure (1) or (2).

Special conditions for safe use

• Precautions shall be taken to minimize the risk from electrostatic discharge of painted parts.
• When the enclosure of the flow meter or the converter are made of aluminum, if it is mounted in an area where the use of EPL Ga equipment is required, it must be installed such that, even in the event of rare incidents, ignition sources due to impact and friction sparks are excluded.
• The dielectric strength of at least 500 V a.c. r.m.s. between the intrinsically safe circuits and the enclosure of the flow meter or the converter is limited only by the overvoltage protection.

Figure 10.1 Wiring Procedure for Grounding Terminals
(3) Operation

**WARNING**

- In case of Flameproof, before opening the cover, turn off the power and wait for at least 3 minutes.
- Take care not to generate mechanical spark when access to the instrument and peripheral devices in hazardous locations.

(4) Maintenance and Repair

**WARNING**

Only personnel authorized by Yokogawa Electric Corporation can repair the equipment.

(5) Installation Diagram of Intrinsically safe (and Note)

![Diagram of Intrinsically safe installation](image)

**Electrical data:**

Signal/Supply Circuit (Terminals SUPPLY + and –):

- \( U_i = 30 \text{ V} \), \( I_i = 300 \text{ mA} \), \( P_i = 0.9 \text{ W} \) (linear source),
- \( C_i = 14 \text{ nF}, L_i = 0 \text{ mH} \)

Pulse Circuit (Terminals PULSE + and –):

- \( U_i = 30 \text{ V} \), \( I_i = 300 \text{ mA} \), \( P_i = 0.9 \text{ W} \) (linear source),
- \( C_i = 14 \text{ nF}, L_i = 0 \text{ mH} \)

*: Read "Contact rating" for the maximum current value of Pulse Circuit

**Note:**

- It shall be assured that the voltage difference between the output circuits of the associated apparatus (safety barriers) is not more than 30V.
- Cables for the connection for Signal/Supply Circuit and Pulse Circuit shall be of Type A or B in accordance with EN 60079-14, otherwise the sum of \( I_o \) of the associated apparatus (safety barriers) shall be not more than 300 mA.

(6) Electrical Connection

The type of electrical connection is stamped near the electrical connection port according to the following codes.

- Vmax=30 V
- Imax=165mA
- Pi=0.9W
- Ci=12nF
- Li=0.15mH

**Installation requirements between flowmeter, converter and Safety Barrier**

\[ V_t \text{ or } V_{oc} \leq V_{max} \]
\[ I_t \text{ or } I_{sc} \leq I_{max} \]
\[ P_o \leq P_i \]
\[ C_a \leq C_i + C_{cable} \]
\[ L_a \leq L_i + L_{cable} \]

**Note:**

1. In any safety barrier used output current must be limited by a resistor 'R' such that Isc=Voc/R.

2. Any Single FM Approved Barrier of multiple barriers FM Approved for this configuration who's parameters meet the above installation requirements.

3. Input voltage of the safety barrier must be less than 250Vrms/Vdc.

4. Installation should be in accordance with National Electrical Code, ANSI/ NFPA 70.

5. Dust-tight conduit seal must be used when installed in class II and III environments.

6. Do not alter drawing without authorization from FM.

Internal Capacitance Ci: 14nF
Internal Inductance Li: 0mH
Electrical Connection: ANSI 1/2 NPT female,
ISO M20 X 1.5 female
Special conditions for safe use

- Precautions shall be taken to minimize the risk from electrostatic discharge of painted parts.
- When the enclosure of the flow meter or the converter are made of aluminum, if it is mounted in an area where the use of EPL Ga equipment is required, it must be installed such that, even in the event of rare incidents, ignition sources due to impact and friction sparks are excluded.
- The dielectric strength of at least 500 V a.c. r.m.s. between the intrinsically safe circuits and the enclosure of the flow meter or the converter is limited only by the overvoltage protection.

(2) Installation

**WARNING**

- All wiring shall comply with local installation requirements and local electrical code.
- Use the suitable heat-resisting cables (over 90°C) for the digital YEW FLO Series Vortex Flowmeter when the ambient temperature exceeds 60°C and/or the process temperature exceeds 200°C.
- Cable glands and adapters shall be of Ex “d” for Ex “d” installations.
- Cable glands and adapters shall be installed so as to maintain the specified degree of protection (IP Code) of the flowmeter.

The grounding terminals are located on the inside and outside of the terminal area. Connect the cable to grounding terminal in accordance with wiring procedure (1) or (2).

![Wiring Procedure for Grounding Terminals](image.png)

[Remote type]

- Safety barriers

**Electrical parameters of vortex flowmeter (DY) and converter (DYA).**

- $U_i (V_{max}) = 30 \text{ V}$
- $I_i (I_{max}) = 165 \text{ mA}$
- $P_i (P_{max}) = 0.9 \text{ W}$
- $C_i = 12 \text{ nF}$
- $L_i = 0.15 \text{ mH}$

**Installation requirements between flowmeter, converter and Safety Barrier**

- $U_o \leq U_i$
- $I_o \leq I_i$
- $P_o \leq P_i$
- $C_o \geq C_i + C_{cable}$
- $L_o \geq L_i + L_{cable}$
- $V_{oc} \leq V_{max}$
- $I_{sc} \geq I_{max}$
- $C_a \geq C_i + C_{cable}$
- $L_a \geq L_i + L_{cable}$

- $U_o, I_o, P_o, C_o, L_o, V_{oc}, I_{sc}, C_a$ and $L_a$ are parameters of barrier.

**WARNING**

- In any safety barrier used output current must be limited by a resistor ‘R’ such that $I_o = U_o / R$ or $I_{sc} = V_{oc} / R$.
- The safety barrier must be CSA certified.
- Input voltage of the safety barrier must be less than 250 Vrms/Vdc.
- Installation should be in accordance with Canadian Electrical Code Part I.
- Dust-tight conduit seal must be used when installed in class II and III environments.
- Do not alter drawing without authorization from CSA.

- Specified Current: less than 1mA

* In case that ambient temperature exceeds 50°C, use heat-resistant cables with maximum allowable temperature of 70°C or above.
11. COMMUNICATION (FIELDBUS)

Fieldbus is fully dependent upon digital communication protocol and differs in operation from conventional 4 to 20 mA transmission and the BRAIN communication protocol. It is recommended that novice users use fieldbus devices in accordance with the procedures described in this section. The procedures assume that fieldbus devices will be set up on a bench or in an instrument shop.

11.1 Amplifier for Fieldbus Communication Type

Read IM 01F06A00-01EN for the details of the amplifier. This section encompasses topics applicable to only the Fieldbus communication type.

1. The Fieldbus communication type has no local key access function.
2. The Fieldbus communication type has no BT200 (BRAIN TERMINAL) connection pin.
3. The Fieldbus communication type has a simulation function. The SIMULATE_ENABLE switch is mounted on the amplifier. Read Section 11.6 “Simulation Function” for details of the simulation function.

![Amplifier unit](F1101.ai)

Figure 11.1 Amplifier for Fieldbus Communication

11.2 Connection of Devices

The following instruments are required for use with Fieldbus devices:

- **Power supply:**
  
  Fieldbus requires a dedicated power supply. It is recommended that current capacity be well over the total value of the maximum current consumed by all devices (including the host). Conventional DC current cannot be used as is.

- **Terminator:**
  
  Fieldbus requires two terminators. Read the supplier for details of terminators that are attached to the host.

- **Field devices:**
  
  Connect your Fieldbus communication type digitalYEWFLO to a fieldbus. Two or more digitalYEWFLOs and other field devices can be connected. For the terminal assignment on the digitalYEWFLO, read Table 11.1.

<table>
<thead>
<tr>
<th>Terminal Symbols</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SUPPLY</td>
<td>Fieldbus Communication Signal</td>
</tr>
<tr>
<td>SUPPLY</td>
<td>Terminals</td>
</tr>
<tr>
<td></td>
<td>Grounding Terminal</td>
</tr>
</tbody>
</table>

- **Host:**
  
  Used for accessing field devices. A dedicated host (such as DCS) is used for an instrumentation line while dedicated communication tools are used for experimental purposes. For operation of the host, read the instruction manual for each host. No other details on the host are given in this manual.

- **Cable:**
  
  Used for connecting devices. Read “Fieldbus Technical Information” (TI 38K03A01-01E) for details of instrumentation cabling. For laboratory or other experimental use, a twisted pair cable two to three meters in length with a cross section of 0.9 mm² or more and a cycle period of within 5 cm (2 inches) may be used. Termination processing depends on the type of device being deployed. For the digitalYEWFLO, use terminal lugs applicable to M4 screw terminals. Some hosts require a connector.

Read Yokogawa when making arrangements to purchase the recommended equipment. Connect the devices as shown in Figure 11.2. Connect the terminators at both ends of the trunk, with a minimum length of the spur laid for connection.

The polarity of signal and power must be maintained.
### 11.3 Host Setting

To activate Fieldbus, the following settings are required for the host.

#### IMPORTANT

Do not turn off the power immediately after setting. When the parameters are saved to the EEPROM, the redundant processing is executed for the improvement of reliability. If the power is turned off within 60 seconds after setting is made, the modified parameters are not saved and the settings may return to the original values.

### Table 11.2 Operation Parameters

- 0xFB: Portable device address
- 0xFF: Portable device address

**Note 1:** LM device: with bus control function (Link Master function)
**Note 2:** BASIC device: without bus control function
11.4 Power-on of digitalYEWFLO and Bus

Turn on the power to the host, bus, and digitalYEWFLO. If any segments do not light, or if a current anomaly occurs, check the voltage of the power supply for the digitalYEWFLO. The device information, including PD tag, Node address, and Device ID, is described on the sheet attached to digitalYEWFLO. The device information is given in duplicate on this sheet. Using the host device display function, check that the digitalYEWFLO is in operation on the bus.

Figure 11.4  Device Information Sheet Attached to digitalYEWFLO

Unless otherwise specified, the following settings are in effect when shipped from the factory. If no digitalYEWFLO is detected, check the available address range. If the node address and PD Tag are not specified when ordering, default value is factory set. If two or more digitalYEWFLOs are connected at a time with default value, only one digitalYEWFLO will be detected from host as digitalYEWFLOs have the same initial address. Connect the digitalYEWFLOs one by one and set a unique address for each.

Read IM 01F06F00-01EN Chapter 4 for “GETTING STARTED”, Chapter 5 for “CONFIGURATION” and Chapter 6 for “EXPLANATION OF BASIC ITEMS”.

11.5 Generation of Alarm

11.5.1 Indication of Alarm

When the self-diagnostics function indicates that a device is faulty, an alarm (device alarm) is issued from the resource block. When an error (block error) is detected in each function block or an error in the process value (process alarm) is detected, an alarm is issued from each block. If an LCD indicator is installed, the error number is displayed as AL-XX. If two or more alarms are issued, multiple error numbers are displayed in 2-second intervals. (when “1” is set to DISPLAY_CYCLE).

Figure 11.5  Error Identification on Indicator

The error details corresponding to alarm indications on the LCD indicator and whether or not switches are provided to disable the corresponding alarms are shown in Table 11.3. For the alarms for which an alarm mask switch is provided, the default alarm settings are also shown. Those alarms for which an alarm mask switch is not provided are enabled at all times. For how to modify these mask switch statuses, read IM 01F06F00-01EN APPENDIX 3 “OPERATION OF EACH PARAMETER IN FAILURE MODE.”

</tbody>
</table>

*: Not provided for a model with the option /MV and with the fluid density calculation set to be active.
11.5.2 Alarms and Events

Each digitalYEWFLO can report the following alarms and events as alerts.

**Analog Alerts** (Generated when a process value exceeds threshold)
- By AI Block: Hi-Hi Alarm, Hi Alarm, Low Alarm, Low-Low Alarm

**Discrete Alerts** (Generated when an abnormal condition is detected)
- By Resource Block: Block Alarm, Write Alarm
- By Transducer Block: Block Alarm
- By AI Block: Block Alarm
- By PID Block: Block Alarm

**Update Alerts** (Generated when an important (restorable) parameter is updated)
- By Resource Block: Update Event
- By Transducer Block: Update Event
- By AI Block: Update Event
- By PID Block: Update Event

An alert has the following structure:

<table>
<thead>
<tr>
<th>Subindex</th>
<th>Analog Alert</th>
<th>Discrete Alert</th>
<th>Update Alert</th>
<th>Parameter Name</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 1 1</td>

</tr>
</tbody>
</table>

11.6 Simulation Function

The simulation function simulates the input of a function block and lets it operate as if the data was received from the transducer block. It is possible to conduct testing for the downstream function blocks or alarm processes.

A SIMULATE_ENABLE jumper switch is mounted on the digitalYEWFLO’s amplifier. This is to prevent the accidental operation of this function. When this is switched on, simulation is enabled. (Read Figure 11.4.) To initiate the same action from a remote terminal, if REMOTE LOOP TEST SWITCH is written to SIM_ENABLE_MSG (index 1044) parameter of the resource block, the resulting action is the same as is taken when the above switch is on. Note that this parameter value is lost when the power is turned off. In simulation enabled status, an alarm is generated from the resource block, and other device alarms will be masked; for this reason the simulation must be disabled immediately after using this function.

The SIMULATE parameter of AI block consists of the elements listed in Table 11.5 below.

<table>
<thead>
<tr>
<th>Sub-index</th>
<th>Parameters</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Simulate Status</td>
<td>Sets the data status to be simulated.</td>
</tr>
<tr>
<td>2</td>
<td>Simulate Value</td>
<td>Sets the value of the data to be simulated.</td>
</tr>
<tr>
<td>3</td>
<td>Transducer Status</td>
<td>Displays the data status from the transducer block. It cannot be changed.</td>
</tr>
<tr>
<td>4</td>
<td>Transducer Value</td>
<td>Displays the data value from the transducer block. It cannot be changed.</td>
</tr>
<tr>
<td>5</td>
<td>Simulate En/Disable</td>
<td>Controls the simulation function of this block: 1: Disabled (standard); 2: Active(simulation)</td>
</tr>
</tbody>
</table>

When Simulate En/Disable in Table 11.5 above is set to “Active”, the applicable function block uses the simulation value set in this parameter instead of the data from the transducer block. This setting can be used for propagation of the status to the trailing blocks, generation of a process alarm, and as an operation test for trailing blocks.

**SIMULATE_ENABLE Switch**

Set to OFF during normal operation.
Not used.

![SIMULATE_ENABLE Switch Position](F1106.ai)

Read IM 01F06F00-01EN Chapter 8 for “DEVICE STATUS”.
12. EXPLOSION PROTECTED TYPE INSTRUMENT FOR FIELDBUS COMMUNICATION TYPE

**NOTE**

Read Chapter 10 for other Explosion Protected Type of digitalYEWFLO Series Vortex Flowmeter.

In this section, further requirements and differences for explosion protected type instrument are described. For explosion protected type instrument, the description in this chapter is prior to other description in this Instruction Manual.

**WARNING**

- Only trained persons use this instrument in industrial locations.

**CAUTION**

- Process temperature and ambient temperature on this section are the specifications for explosion protected type. Read IM 01F06A00-01EN Section 13.1 "Standard Specifications" before operating.

12.1 ATEX

**WARNING**

- Only trained persons use this instrument in industrial locations.
- Electrostatic charge may cause an explosion hazard.
  Avoid any actions that cause the generation of electrostatic charge, such as rubbing with a dry cloth on coating face of product.

---

**Technical Data**

- **Intrinsically Safe Ex ia**
- **Certificate:** KEMA 03ATEX1136X
- **Type of Protection:** Ex ia IIC T4...T1 Ga (Integral Type) Ex ia IIC T6...T1 Ga (Remote Type Detector) Ex ia IIC T4 Ga (Remote Type Converter)

- **Group:** II
- **Category:** 1 G
- **Ambient Temperature:** -40 to +60°C (Integral Type) -50 to +80°C (Remote Type Detector)
  - Temperature Class Process Temperature
  - T4 ≤ +135°C
  - T3 ≤ +200°C
  - T2 ≤ +250°C
  - T1 ≤ +250°C
  - T6 ≤ +84/ [+78]°C (Remote Type Detector)
  - T5 ≤ +100°C
  - T4 ≤ +135°C
  - T3 ≤ +199°C
  - T2 ≤ +299/ [+288]°C
  - T1 ≤ +448/ [+438]°C

- **Electrical Data:**
  - Entity Ui = 24 V, \( I_i = 250 \) mA, \( P_i = 1.2 \) W, \( C_1 = 3.52 \) nF, \( L_i = 0 \) mH
  - FISCO(IIC) Ui = 17.5 V, \( I_i = 500 \) mA, \( P_i = 5.5 \) W, \( C_1 = 3.52 \) nF, \( L_i = 0 \) mH

- **Connect sensor circuit of DYA and DY-N (HT)**

---

IM 01F06A01-01EN
**Special conditions for safe use**

1. For process temperatures above 250°C the flow meters of the /HT version must be used.
2. Because the enclosures of the flow meters and the converter are made of aluminium alloy, when used in an potentially explosive atmosphere requiring apparatus of equipment category 1 G, they must be installed so, that even in the event of rare incidents, an ignition source due to impact of friction between the enclosure and iron/steel is excluded.
   - Precautions shall be taken to minimize the risk from electrostatic discharge of painted parts.
   - The dielectric strength of at least 500 V a.c. r.m.s. between the intrinsically safe circuits and the enclosure of the flow meter or the converter is limited only by the overvoltage protection.

### Installation

**WARNING**

- All wiring shall comply with local installation requirements and local electrical code.
- Use the suitable heat-resisting cables (over 90°C) for the digitalYEWFLO Series Vortex Flowmeter when the ambient temperature exceeds 60°C and/or the process temperature exceeds 200°C.
- For flameproof; Cable glands, adapters and/or blanking elements shall be of Ex “d” for Ex “d” installations. They shall be installed so as to maintain the specified degree of protection (IP Code) of the flowmeter.
- For ATEX intrinsically safe Ex ic; Cable glands, adapter and/or blanking elements shall be of Ex “n”, Ex “e”, or Ex “d” and shall be installed so as to maintain the specified degree of protection (IP Code) of the equipment.

### Electrical data:

Supply and Output Circuit (SUPPLY + and –);

- FISCO Field Device
  - Entity Concept:
    - Maximum Input Voltage Ui: 32Vdc
    - Internal Capacitance Ci: 3.52nF
    - Internal Inductance Li: 0mH
  - Electrical Connection: ANSI 1/2 NPT female, ISO M20 X 1.5 female

For the connection of DYA to DY-N:
- Maximum cable capacitance: 160nF
- Electrical Connection: ANSI 1/2 NPT female, ISO M20 X 1.5 female

* Use /HT option above +250°C, use /LT option below -29°C, [ ] for /MV option.
### Operation

**WARNING**

- In case of Flameproof, wait 3 minutes after power is turned off, before opening the covers.
- Take care not to generate mechanical spark when access to the instrument and peripheral devices in hazardous locations.

### Maintenance and Repair

**WARNING**

Only personnel authorized by Yokogawa Electric Corporation can repair the equipment.
Installation Diagram of Intrinsically safe (and Note)

Note
- In the rating 1, the output current of the barrier must be limited by a resistor $R_a$ such that $I_o = U_o / R_a$.
- In the rating 2, the output of the barrier must be the characteristics of the trapezoid or the rectangle and this transmitter can be connected to Fieldbus equipment which are in agreement with the FISCO model.
- The terminators may be built-in by a barrier.
- More than one field instrument may be connected to the power supply line.
- The terminator and the safety barrier shall be certified.

  Electrical Connection: ANSI 1/2NPT female

### Wiring

- **Intrinsically Safe**

### Operation

**WARNING**

- Take care not to generate mechanical spark when access to the instrument and peripheral devices in hazardous locations.

### Maintenance and Repair

**WARNING**

- The instrument modification or part replacements by other than authorized of Yokogawa Electric Corporation is prohibited and will void the approval of FM Approvals.

### NOTE

- If you are using a hand-held terminal in the hazardous area, read the Control Drawing or Instruction Manual of handheld terminal.
Installation Diagram

Intrinsically Safe (and WARNING)

Yokogawa Electric Corporation

Model: DY Series
Date: April 18, 2014

Notes:
1. This drawing replaces the former control drawing IFM021-A12.
2. No revision to this drawing without prior approval of FM.
3. Installation must be in accordance with the National Electric Code (NFPA70), ANSI/ISA RP12.06.01 and relevant local codes.
4. The associated apparatus must be FM approved.
5. Control equipment connected to the associated apparatus must not use or generate more than 250 V a.c. or d.c.
6. In case of entity-concept installations, the associated apparatus must be a linear source which meets the following conditions.
   - \[ V_{oc} (or U_o) \leq V_{max} (or U_i) \]
   - \[ I_{sc} (or I_o) \leq I_{max} (or I_i) \]
   - \[ P_o \leq P_{max} (or P_i) \]
   - \[ C_a (or C_o) \leq C_i + C_{cable} \]
   - \[ L_a (or L_o) \leq L_i + L_{cable} \]
7. FISCO installation must be in accordance with ANSI/ISA-60079-25 or ANSI/ISA-60079-27.
8. The control drawing of the associated apparatus must be followed when installing the flow meter or flow converter.
9. The terminator(s) must be FM approved.
10. The dielectric strength of at least 500 V a.c. between the intrinsically safe circuits and the enclosure of the flow meter or the converter is limited only by the overvoltage protection.
11. Dust-tight conduit seals must be used when installed in Class II or Class III environments.
12. Precautions shall be taken to minimize the risk from electrostatic discharge of painted parts of the enclosure.
13. WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE USER’S MANUAL
14. WARNING – IN THE CASE WHERE THE ENCLOSURE OF THE VORTEX FLOW METER AND CONVERTER ARE MADE OF ALUMINUM, IF IT IS MOUNTED IN ZONE 0, IT MUST BE INSTALLED SUCH THAT EVEN IN THE EVENT OF RARE INCIDENTS, IGNITION SOURCES DUE TO IMPACT AND FRICTION SPARKS ARE EXCLUDED.
15. WARNING – SUBSTITUTION OF COMPONENTS MAY IMPAIR INTRINSIC SAFETY
1. This drawing replaces the former control drawing IFM021-A12.
2. No revision to this drawing without prior approval of FM.
3. Installation must be in accordance with the National Electric Code (NFPA70), ANSI/ISA RP12.06.01, and relevant local codes.
4. In case the Nonincendive Field Wiring Concept is used for the interconnection, FM approved Associated Nonincendive Field Wiring Apparatus, which meets the following conditions, must be used as the power supply/control equipment:
   \[ V_{oc} (or U_{o}) \leq V_{max} (or U_{i}) \]
   \[ C_{a} (or C_{o}) \leq C_{i} + C_{cable} \]
   \[ L_{a} (or L_{o}) \leq L_{i} + L_{cable} \]
5. FISCO installation must be in accordance with ANSI/ISA-60079-27.
6. The control drawing of the associated apparatus must be followed when installing the flow meter or flow converter.
7. The terminator(s) must be FM approved.
8. Dust-tight conduit seals must be used when installed in Class II or Class III environments.
9. **WARNING – EXPLOSION HAZARD. FOR INSTALLATION OTHER THAN NONINCENDIVE FIELD WIRING, DO NOT DISCONNECT EQUIPMENT WHEN A FLAMMABLE OR COMBUSTIBLE ATMOSPHERE IS PRESENT**
10. **WARNING – SUBSTITUTION OF COMPONENTS MAY IMPAIR SUITABILITY FOR DIVISION 2**

  **Certificate:** IECEx DEK 15.0012X

  **Type of Protection:**
  - Ex ia IIC T4...T1 Ga (Integral Type)
  - Ex ia IIC T6...T1 Ga (Remote Type Detector)
  - Ex ia IIC T4 Ga (Remote Type Converter)

- **Ambient Temperature:**
  - -40 to +60°C (Integral Type)
  - -50 to +80°C (Remote Type Detector)
  - -40 to +80°C (Remote Type Converter)

  **(Option /LT below -29°C, [ ] for Option /MV at T6)**

- **Connect sensor circuit of DYA and DY-N (/HT)**

  **Electrical Data:**
  - **Entity**
    - Ui = 24 V, Ii = 250 mA
    - Pi = 1.2 W,
    - Ci = 3.52 nF
    - Li = 0 mH
  - **FISCO (IIC)**
    - Ui = 17.5 V
    - Ii = 500 mA
    - Pi = 5.5 W,
    - Ci = 3.52 nF
    - Li = 0 mH

  **Temperature Class:**
  - (Integral Type)
    - T4 ≤ +135°C
    - T3 ≤ +200°C
    - T2 ≤ +250°C
    - T1 ≤ +250°C
  - (Remote Type Detector)
    - T6 ≤ +84/[+78]°C
    - T5 ≤ +100°C
    - T4 ≤ +135°C
    - T3 ≤ +199°C
    - T2 ≤ +299/[+288]°C
    - T1 ≤ +449/[+438]°C

  ***: Use /HT option above +250°C, use /LT option below -29°C, [ ] for /MV option.**

**Electrical Connection:** ANSI 1/2 NPT female, ISO M20 X 1.5 female

**Special conditions for safe use**

- For process temperatures above +250°C the flow meters of the /HT version must be used.
- Precautions shall be taken to minimize the risk from electrostatic discharge of painted parts.
- When the enclosure of the flow meter or the converter is made of aluminum, if it is mounted in an area where the use of EPL Ga equipment is required, it must be installed such that, even in the event of rare incidents, ignition sources due to impact and friction sparks are excluded.
- The dielectric strength of at least 500 V a.c. r.m.s. between the intrinsically safe circuits and the enclosure of the flow meter or the converter is limited only by the overvoltage protection.

**Installation**

**WARNING**

- All wiring shall comply with local installation requirements and local electrical code.
- Use the suitable heat-resisting cables (over 90°C) for the digital YEWFLO Series Vortex Flowmeter when the ambient temperature exceeds 60°C and/or the process temperature exceeds 200°C.
- The cable entry devices shall be certified in type of protection flame proof enclosure “d” and suitable for the conditions of use and correctly installed.
- Unused apertures shall be closed with certified blanking elements in type of protection flame proof enclosure “d”.

---

The grounding terminals are located on the inside and outside of the terminal area. Connect the cable to grounding terminal in accordance with wiring procedure (1) or (2).

**Figure 12.1 Wiring Procedure for Grounding Terminals**
Operation

WARNING

- In case of Flameproof, wait 3 minutes after power is turned off, before opening the covers.
- Take care not to generate mechanical spark when access to the instrument and peripheral devices in hazardous locations.

Maintenance and Repair

WARNING

Only personnel authorized by Yokogawa Electric Corporation can repair the equipment.

Electrical Connection

The type of electrical connection is stamped near the electrical connection port according to the following codes.

<table>
<thead>
<tr>

* PS: Maximum allowable pressure for Flow tube, DN: Nominal size
** Table 6 covered by ANNEX II of Directive 2014/68/EU
*** Article 4, paragraph 3 of Directive 2014/68/EU
**** MODELS classified in CATEGORY II shall not be used for unstable gases of Group 1.

CE marking:
CE marking is attached for non-Explosion protected type and ATEX Explosion protected type.
The product which is attached CE marking is in conformity with the statutory requirements of the applicable EU Directives.

EU RoHS Directive:
EN 50581

(2) Installation

⚠️ WARNING

- Please tighten the bolts for piping joint according to the appropriate torque values.
- Please take measure to protect the flowmeters from forces caused by vibration through piping.

(3) Operation

⚠️ WARNING

- The temperature and pressure of fluid should be applied under the normal operating condition.
- The ambient temperature should be applied under the normal operating condition.
- Please pay attention to prevent the excessive pressure like water hammer, etc. When water hammer is to be occurred, please take measures to prevent the pressure from exceeding PS (maximum allowable pressure) by setting the safety valve, etc. at the system and the like.
- When external fire is to be occurred, please take safety measures at the device or system not to influence the flowmeters.
- Please pay attention not to abrade the metal pipe, when using the fluid to abrade the metal pipe such as slurry and sand are contained.
INSTALLATION AND OPERATING PRECAUTIONS FOR FLAMEPROOF ENCLOSURE “d” CERTIFIED UNDER JAPANESE TYPE CERTIFICATION

1. General
The following describes precautions on electrical equipment protection by flameproof enclosure “d” for use in explosive atmospheres (hereinafter referred to as Flameproof enclosure “d” equipment). Following the Labor Safety and Health Laws of Japan, flameproof enclosure “d” equipment is an electrical equipment which has Type Approval by Japanese certification body according to Ordinance No.45 of 30 September 1972 and the latest amendment: Ordinance No. 121 of 30 June 2016 by the Japanese Ministry of Health, Labor and Welfare. These certified equipment can be used in explosive atmospheres.
Certified equipment includes a certification label, an equipment nameplate with the necessary specifications, and warning labels for Flameproof enclosure “d”. Please confirm these precautionary items and use the equipment to meet specification requirements.
For electrical wiring and maintenance servicing, read USER’S GUIDELINES for Installations for Explosive Atmospheres in General Industry.

2. Electrical equipment protection by flameproof enclosures “d”
Flameproof enclosure “d” has an enclosure(s) in which the parts which can ignite an explosive gas atmosphere are placed and which can withstand the pressure developed during an internal explosion of an explosive mixture, and which prevents the transmission of the explosion to the explosive gas atmosphere surrounding the enclosure.
In this manual, the word ‘flameproof enclosure “d” ’ is applied to the flameproof equipment combined with the types of protection increased safety “e”, oil immersion safety “o”, intrinsic safety “I”, and special protection “s”, as well as flameproof enclosure “d”.

3. Terminology
(1) Enclosure
It contains all the walls, doors, covers, cable glands, rods, spindles, shafts, etc. which contribute to the Type of Protection or the degree of protection IP of the equipment.
(2) Enclosure internal volume
It is total internal volume of the enclosure in which the contents are essential in service, the volume to be considered is the remaining free volume.
(3) Width of flameproof joint
It is shortest path through a flameproof joint from the inside to the outside of an enclosure. This definition does not apply to threaded joints.
(4) Gap of flameproof joint
It is distance between the corresponding surfaces of a flameproof joint when the electrical apparatus enclosure has been assembled. For cylindrical surfaces, forming cylindrical joints, the gap is the difference between the diameters of the bore and the cylindrical component.
4. Installation of Flameproof Equipment

(1) Installation Area
Flameproof equipment may be installed, in accordance with applicable gases, in a hazardous area in Zone 1 or 2, where the specified gases are present. Those equipment shall not be installed in a hazardous area in Zone 0.

Note: Hazardous areas are classified in zones based upon the frequency of the appearance and the duration of an explosive gas atmosphere as follows:

Zone 0: Place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas or vapour is present continuously or for long periods or frequently.

Zone 1: Place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas or vapour is likely to occur in normal operation occasionally.

Zone 2: Place in which an explosive atmosphere consisting of a mixture with air of flammable substances in the form of gas or vapour is not likely to occur in normal operation but, if it does occur, will persist for a short period only.

(2) Environmental Conditions
To comply with the ambient temperature range which indicated on the nameplate. If the flameproof equipment are exposed to direct sunshine or radiant heat from plant facilities, appropriate thermal protection measures shall be taken.

5. External Wiring for Flameproof Equipment
Flameproof equipment requires cable wiring for their electrical connections. For cable wiring, cable glands (cable entry devices for flameproof type) to wiring connections shall be attached. All non-live metal parts such as the enclosure shall be securely grounded. For details, read USER’S GUIDELINES for Installations for Explosive Atmospheres in General Industry.

(1) Cable Wiring
- For cable wiring, Ex cable glands attached (or supplied) with the electrical equipment of Flameproof enclosure shall be used and connected to conduit.
- Specific cables shall be used as recommended by the USER’S GUIDELINES for Installations for Explosive Atmospheres in General Industry.
- In necessary, appropriate protective pipes (conduit or flexible pipes), ducts or trays shall be used for preventing the cable run (outside the cable glands) from damage.
- To prevent explosive atmosphere from being propagated form Zone 1 or 2 hazardous location to any different location or non-hazardous location through the protective pipe or duct, apply sealing of the protective pipes near the individual boundaries, or fill the ducts with sand appropriately.
- When branch connections of cables or cable and conduit wiring is made, a flameproof connection box shall be used. In this case, flameproof cable glands meeting the type of connection box must be used for cable connections to the box.

⚠️ IMPORTANT
The electrical equipment of Flameproof enclosure is certified to be used with the attached Ex cable gland(s). Therefore, the attached Ex cable gland(s), Yokogawa-specified Ex cable gland, shall be used to satisfy this requirement.
6. Maintenance of Flameproof Equipment

To maintain the flameproof equipment, do the following. For details, read USER’S GUIDELINES for Installations for Explosive Atmospheres in General Industry.

(1) Maintenance servicing with the power on.
Flameproof equipment shall not be maintenance-serviced with its power turned on. However, in cases where maintenance servicing is to be conducted with the power turned on, with the equipment cover removed, always shall use a gas detector to check that there is no explosive gas in that location. If it cannot be checked whether an explosive gas is present or not, maintenance servicing shall be limited to the following two items:
(a) Visual inspection
Visually inspect the flameproof equipment, metal conduits, and cables for damage or corrosion, and other mechanical and structural defects.
(b) Zero and span adjustments
These adjustments should be made only to the extent that they can be conducted from the outside without opening the equipment cover. (e.g. by software) In doing this, great care must be taken not to cause mechanical sparks with tools.

(2) Repair
If the flameproof equipment requires repair, turn off the power and transport it to a safety (non-hazardous) location. Observe the following points before attempting to repair the equipment.
(a) Make only such electrical and mechanical repairs as will restore the equipment to its original condition. For the flameproof equipment, the gaps and path lengths of joints and mating surfaces, and mechanical strength of enclosures are critical factors in explosion protection. Exercise great care not to damage the joints or shock the enclosure.
(b) If any damage occurs in threads, joints or mating surfaces, inspection windows, connections between the sensor and terminal box or clamps, or external wiring connections which are essential in flameproof, contact Yokogawa Electric Corporation.

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not attempt to re-process threaded connections or refinish joints or mating surfaces.</td>
</tr>
</tbody>
</table>

(c) If you attempt to repair the flameproof equipment, company-specified components shall be used.
(d) Before starting to service the equipment, be sure to check all parts necessary for retaining the requirements for flameproof equipment. For this, check that all screws, bolts, nuts, and threaded connections have properly been tightened.

(3) Prohibition of specification changes and modifications
Do not attempt to change specifications or make modifications involving addition of or changes in external wiring connections.
