Connecting to the Input Module
Remove the terminal plate of the 10-CH, Medium-Speed Universal Input Module, 10-CH, Pulse Input Module, and the 10-CH, High-Speed Digital Input Module. Then, use the connection cable between the input module and screw terminal block (sold separately) to connect the input module and the 10-CH screw terminal block as shown in the figure below.

Attachment to a DIN Rail
The screw terminal block can be attached to a DIN rail as shown in the figure below.
General Precautions When Wiring the Input Signal Wires

**WARNING**

- To prevent the possibility of electric shock when wiring, confirm that the power supply source and signal source are turned OFF. After making the connections, secure the terminal cover and do not touch the terminals with your hands.
- For signal wires on which voltage exceeding 30 VAC/60 VDC is applied relative to the ground potential or between signals, use double (reinforced) insulation wires. For all other signal wires, use basic insulation wires. For the withstand voltage of insulation wires, see the table below.

<table>
<thead>
<tr>
<th>Applied Voltage (Vrms or VDC)</th>
<th>Basic Insulation</th>
<th>Double (reinforced) Insulation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 to 150</td>
<td>1350 Vrms</td>
<td>2700 Vrms</td>
</tr>
<tr>
<td>151 to 300</td>
<td>1500 Vrms</td>
<td>3000 Vrms</td>
</tr>
<tr>
<td>301 to 600</td>
<td>2210 Vrms</td>
<td>3700 Vrms</td>
</tr>
</tbody>
</table>

- When wiring the screw terminal block, attach the screw terminal block to the input modules before inputting signals. Electric shock or fire can result if signals are applied to the terminals when the screw terminal block is not connected to the input modules.
- When wiring to the screw terminal block, use round, insulation coated crimp-on lugs (for 4-mm screws) on the terminals that do not come out when loose.
- To prevent fire, use signal wires with a 75°C or higher temperature rating.

**CAUTION**

- If a large pulling force is applied to the input signal wires connected to the MX100 and MW100, the terminal or signal wire may break. To prevent this from happening, secure all the wiring cables to the installation panel.
- Do not apply the voltage exceeding the following levels to each input terminal connected to the 10-CH Medium-speed universal input module. Doing so can damage the module.
  - **Maximum input voltage**
    - Voltage range of 1 VDC or less, TC, RTD, and DI (contact): ± 10 VDC
    - Voltage range of 2 VDC or more, and DI (LEVEL): ± 70 VDC
  - **Maximum common mode voltage**
    - Between channels: 30 VACrms (50/60 Hz)
    - “b” terminals are common to all channels. They are connected together internally.
    - Input to ground: 30 VACrms (50/60 Hz)
  - **Maximum common mode noise voltage**
    - Between channels: 120 VACrms
    - “b” terminals are common to all channels. They are connected together internally.
    - Input to ground: 600 VACrms

- Do not apply the voltage exceeding the following levels to each input terminal connected to the 10-CH Pulse input module or 10-CH High-speed digital input module. Doing so can damage the module.
  - **Maximum input voltage**
    - ± 10 VDC (Pulse input and digital input (-D05)), ± 50 VDC (digital input (-D24))
  - **Maximum common mode voltage**
    - Input to ground: 30 VACrms (50/60 Hz)
  - **Maximum common mode noise voltage**
    - Input to ground: 250 VACrms

- When using the pulse input module with contact input, the measured signal becomes easily affected by wiring impedance at high speed. The cable should be approximately 25 m or less when the pulse width is 0.05 ms, or 500 m or less at 0.5 ms. The wiring impedance varies depending on the such things as the cable length, type, and wiring conditions.
- The MX100 and MW100 are an overvoltage category II (CSA1N.61010-1) instrument.

Wiring Procedure, Specifications, and Other Items Related to the Input/Output Modules

See the MX100/MW100 Data Acquisition Unit Installation and Connection Guide (IM MX100-72E) provided with the main module, or the MX100 Data Acquisition Unit User’s Manual (IM MX100-01E) or the MW100 Data Acquisition Unit User’s Manual (IM MW100-01E) contained in the manual CD-ROM.
